ACKNOWLEDGEMENT

The author expresses his grateful appreciation and gratitude to Dr. B. Ranganathan, B.Sc. (Hons), Ph.D., Chief Bacteriologist, P.L. 460 Scheme (Starter Bacteria), National Dairy Research Institute, Karnal for his valuable guidance and constant encouragement during the entire period of study.

He is greatly thankful to Dr. H. Laxminarayana, Head, Division of Dairy Bacteriology for his keen interest, valuable suggestions and constant help during the period of study.

He is also thankful to Dr. V.K.N. Nambudripad and Dr. R.A. Srinivasan, for their interest and encouragement and other staff members of Dairy Bacteriology Division for their cooperation.

The author expresses sincere thanks to Dr. Noshir N. Dastur, Director, National Dairy Research Institute and to Dr. A.T. Dudani, formerly Principal, Dairy Science College for their interest in the study and providing all facilities for carrying out the investigation.

He is greatly obliged to Dr. S.R. Anand, Associate Professor, Dairy Chemistry Division for help in the biochemical studies and to Shri K.N.S. Shrama for his help in the statistical analysis of the data.

The author is also thankful to Dr. F. Sørskov, World Health Organization, International Bacillus Centre, Copenhagen, Denmark, The Wellcome Research Laboratories Langley Court, Beckenham, Kent, London, Dr. J. Taylor of the Central Public Health Laboratories, Colindale, London, Dr. P. Bhat of Christian Medical College, Vellore and Dr. K.N.A. Rao of Armed Forces Medical College, Poona for the supply of Enteropathogenic E. coli antisera and reference strains used in this study.

He is grateful to Dr. Y. Prasad, Director, Animal Husbandry, Bihar, Patna and Shri A.K. Banerjee, Joint Director (Dairying) for granting leave during the course of study.

The financial assistance by the Indian Council of Agricultural Research, New Delhi during the entire period of this investigation is gratefully acknowledged.
