CONTENTS

I. GENERAL INTRODUCTION 1

II. REVIEW OF LITERATURE 5

1. Incidence of coliforms in milk and milk products. 5
2. Coliforms in raw milk. 6
3. Coliforms in pasteurized milk. 9
4. Coliforms in ice-cream. 14
5. Coliforms in cream and butter. 16
6. Coliforms in cheese. 18
7. Enteropathogenic characteristics of E. coli. 20
8. Milk and milk products as a source of pathogenic E. coli. 25
   a) Milk. 25
   b) Cheese and other dairy products. 27

9. Pathogenicity of E. coli. 30
10. Toxicity of E. coli in laboratory animals. 32
11. Haemolysis of E. coli. 35
12. Heat-resistant characteristics of E. coli. 38
13. Death of bacteria due to moist heat. 40
14. Order of death of bacterial cells. 46
15. Factors influencing deviation from the logarithmic order of death.
   a) Mixed flora. 47
   b) Clumped cells. 48
   c) Flocculation during heating. 48
   d) Deflocculation during heating. 48
   e) Nature of subculture medium. 48

16. Factors influencing the heat-resistance of bacteria. 48
   a) The effect of moisture. 49
   b) The effect of fat. 49
   c) The effect of salt. 50
   d) The effect of carbohydrates. 50
   e) The effect of pH. 51
   f) The effect of proteins. 52
   g) The effect of other protective substances. 53
   h) The effect of cell concentration. 53
   i) The effect of the age of the culture. 54
   j) The effect of recovery medium. 55
   k) The effect of growth temperature. 56

17. Measurement of heat-destruction of microorganisms by moist heat. 57
18. The survivor curve in heat-destruction experiments. 58
19. Survivor curve by direct enumeration.  59
20. Thermal death time.  59
21. Heat-resistance of *E. coli* in milk and milk products.  61

III. OBJECT AND SCOPE OF THE PRESENT STUDY.  64

IV. EXPERIMENTAL.  66

a) Incidence and distribution of enteropathogenic *E. coli* in milk and milk products.  66

1. Collection of samples.  66
2. Determination of coliform counts and isolation of *E. coli*.  67
3. Identification of *E. coli*.  68
4. Biochemical tests.  68
5. Classification of *E. coli*.  68
6. Haemolytic activity.  69
7. Serological identification.  69

a) Slide agglutination test.  69
b) Tube agglutination test.  71

   i) Stage I  72
   ii) Stage II  72
   iii) Stage III (Titration)  73

8. Pathogenicity in mice.  73

b) Heat-resistant characteristics of three selected strains of *E. coli* in milk and milk products.  76

9. Heat-treatment of *E. coli* strains.  76

a) Tube method.  76
b) Ampoule method.  76

10. Preparation of washed cell suspension.  77
11. Inoculation of the cells into the suspending medium and heat-treatment.  78
12. Preliminary heat-treatment of *E. coli* strains at pasteurization temperature.  79
13. Thermal-resistance study of selected strains of *E. coli*.  79

a) Pathogenic and heat-sensitive strain of *E. coli*.  80
b) Pathogenic and heat-resistant strain of *E. coli*.  80
c) Non-pathogenic and heat-resistant strain of *E. coli*.  80

14. Temperature-time combinations during heat-treatment.  81
15. Determination of viability of heat-treated cells.  81
16. Effect of recovery media.  82
17. Influence of various factors on thermal resistance of E. coli.
   a) Substrates.
   b) Cell concentrations.
   c) Growth temperatures
   d) pH of the substrate.

V. RESULTS

a) Incidence and distribution of enteropathogenic E. coli in milk and milk products.

1. Incidence of coliform organisms in milk and milk products.
2. Isolation of E. coli strains.
3. Classification of E. coli biotypes.
4. Fermentation of carbohydrates.
5. Serological grouping of E. coli biotypes.
6. Agglutination titres of enteropathogenic serotypes.
7. Pathogenicity of enteropathogenic E. coli serotypes in mice.
8. The distribution of E. coli serotypes on the basis of β-haemolysis and pathogenicity to mice.
9. Occurrence of enteropathogenic E. coli serotypes in milk and milk products.
10. Occurrence of E. coli strains pathogenic to mice in dairy products.
11. Survival of E. coli strains exposed to pasteurization temperature.

b) Heat-resistant characteristics of three selected E. coli strains in milk and milk products.

13. Heating lag corrections for different substrates.
14. Thermal destruction of E. coli cultures in milk.
15. Thermal destruction of E. coli in cream.
16. Thermal destruction of E. coli in ice-cream mix.
17. Thermal destruction of E. coli in other suspending media.
   a) Nutrient broth.
   b) Distilled water.
   c) Saline.
18. Effect of pre-incubation (growth) temperature on the thermal-resistance of \textit{E. coli}.
19. Effect of initial cell concentration on thermal-resistance of \textit{E. coli}.
20. Effect of pH on the heat-resistant characteristics of \textit{E. coli}.

VI. DISCUSSION 173

VII. SUMMARY AND CONCLUSIONS 207

VIII. BIBLIOGRAPHY 221

IX. APPENDIX (The lethal effect of moist heat on \textit{Escherichia coli}) 236
