ACKNOWLEDGEMENTS

A large number of scholars, colleagues and friends have contributed to the research effort that has gone into this study. Many of them have helped me educate myself in grounds which were unfamiliar to me and others have put in physical or mental effort, in shaping the final outcome.

I have a great debt to R.P. Misra, former Director of the Institute of Development Studies and currently Deputy Director of the UN Centre for Regional Development, Nagoya, Japan. More than being my guide in this research, he has introduced me to the field of regional planning and analysis and has been instrumental in keeping me alive to the issues relating to human settlements for the last ten years. But for his constant encouragement, perhaps, this study would never have been completed, certainly not in this shape.
The field work and data collection for this dissertation were made possible by a generous grant from the Swedish Agency for Research Co-operation with Developing Countries (SAREC) channelled through the International Institute for Environment and Development (IIED), London. This grant was given as part of a project covering four different countries in the developing world. I was borne on the project for a year as the leader of the South Indian study and that gave me time to develop this thesis. The project was on the role of small and medium towns in development processes. The line of research was allowed to be developed by respective team leaders and this provided ample scope to direct the study to coincide with my research interests. Most of the data was collected as part of this project, though it was supplemented by information collected personally.

I record my sincere appreciation to the SAREC and IIED for supporting me and for giving me the freedom to direct the project. I am personally indebted to my friends Dr. Jorge Hardoy and Mr. David Satterthwaite of the IIED's Human Settlement Programme for allowing me maximum flexibility in analysis and in time schedule often to their disadvantage. I think no research manager would ever allow such flexibility. Dr. Hardoy also took pains to read an earlier draft and comment upon.

I also appreciate the trouble taken by Dr. Otto Koenigsberger, editor of Habitat International, in going through a synopsis of this work and making valuable suggestions. Discussions with Dr. VLS Prakasa Rao, (formerly, with Indian Institute of Management, Bangalore) were greatly illuminating.
I learned about many aspects of the study area, possibilities of getting certain data and types of possible analysis from my colleagues. Dr. H.S. Gopala Rao, Professor of Agricultural Marketing and Director of the Institute of Development Studies, is particularly instrumental in the analysis of certain aspects relating to agricultural marketing. Special mention also should be made of my colleagues Mrs. Rameswari Varma, Mrs. Asha Maheswari, Prof. K.S. Rame Gowda, Dr. D.C. Jayasankar, Mr. N.N. Sastry and Mr. R.N. Achyutha.

All the computer work were carried out at the Computer Centre of the Sri. Jayachamarajendra Engineering College and the University Computer Centre at Manasa Gangothri. Mr. Subbaraya of S.J.C.E. Computer Centre and Mr. Harish of the University Computer Centre helped to develop the programme and run them. Dr. Krishna Murthy of Geography Department helped with the cartographic works and Dr. D.A. Shankar of English Department made suggestions to improve the language.

Many heads of Government Departments, organisations, municipal offices and elderly citizens have assisted with the data and information. It is difficult to list them all, but their help cannot be over valued. I should also be thankful to my research assistants, especially Mr. Prabhakaraiah, in assembling the data.

Despite all the helps and assistances I received, there would still be omissions and commissions as well as flaws beyond my comprehension at the moment. For these, I owe an apology to all the scholars, friends and colleagues, who helped and encouraged me, for I am fully responsible for all the shortcomings.
The greatest obstacle I had in this research endeavour was lack of sufficient time. I owe a huge debt to my wife Dr. Vijaya Leela Rao and my son, Shajay, for supporting me with more time and providing additional hands and memory space. The whole report was written in a short span of 3 months and that was possible only for their help. Vijaya assisted me in the data collection, analysis, field work, data filing and organizing the mechanics of producing this report. Shajay, even without understanding what his father was doing at odd hours, put great restraints on himself and his spatial behaviour within our house. He also provided pleasant distractions from drab work.

Mr. K.V. Anantha Rama, provided the secretarial assistance and typed all the drafts and the main body of the final report. Mr. V. Madhu, used his skill in putting bunches of illegible figures into his typewriter to produce excellently formatted tables.

(B.S. BHOOSAN)
