Analysis of variance for lactation milk production in first to third lactations by method of fitting constants.

Analysis of variance for 300-days' average lactation milk production (kg) during first to fifth lactation (pooled data) by method of fitting constants.

Least squares constants for different factors affecting 300-days' completed lactation milk production during first to fifth lactation (pooled data).

Estimates of least squares mean, standard error, standard deviation and coefficient of variation for various monthly partial lactation milk yield records of first lactation.

Estimates of least squares mean, standard error, standard deviation and coefficient of variation for various cumulative partial lactation milk yield records of first lactation.

Least squares constants for different factors affecting various partial lactation milk yield records (kg) on monthly consecutive basis during first lactation.

Least squares constants for different factors affecting various partial lactation milk yield records (kg) on cumulative basis during first lactation.

Least squares analysis of variance for consecutive 30-days' milk yield (kg) of first lactation by method of fitting constants.

Least squares analysis of variance for cumulative partial milk yield records (kg) of first lactation by method of fitting constants.

Estimates of heritability for lifetime milk production (kg) and various lactation records.

Analysis of variance for heritability estimates of 300-days' lactation milk production (kg) by paternal half-sib intraclass correlation method.
25 Analysis of variance for repeatability estimate of 300-days completed lactation milk production (kg) based on first three lactation records.

26 Estimates of phenotypic, genetic and environmental correlations between age at first calving (months) and 300-days milk production (kg) of first three lactations.

27 Estimates of phenotypic, genetic and environmental correlations between age at first calving (months) and monthly milk yield records (kg) of first lactation.

28 Estimates of phenotypic, genetic and environmental correlations between age at first calving (months) and various monthly cumulative partial milk yield records (kg) of first lactation.

29 Estimates of phenotypic, genetic and environmental correlations between different lactation milk yields (kg) on 300-days' basis.

30 Least squares analysis of variance for certain other traits during first lactation.

31 Least squares analysis of variance for certain other traits during first to fifth lactation (pooled data).

32 Least squares constants for different periods affecting certain other characters during first lactation.

33 Least squares constants for different factors affecting certain other traits during first to fifth lactation (Pooled Data).

34 Heritability estimates of lactation length (days) during first and second lactations and on pooled data of first five lactations.

34a Heritability estimates of dry period (days) during first and second lactations and on pooled data of first five lactations.
34b Heritability estimates of inter-calving period (days) of first and second lactations and on pooled data of first five lactations.

34c Heritability estimates of service period (days) during first and second lactations and on pooled data of first five lactations.

34d Heritability estimates of gestation length (days) of first and second calvings and on pooled data of first five calvings.

34e Estimates of repeatability of certain economic characters by intraclass correlation method (based on the average of first three lactation records).

35 Estimates of phenotypic, genetic and environmental correlations among 300-days' first lactation milk production (kg) and certain other traits of first lactation.

35a Estimates of phenotypic, genetic and environmental correlations between age at first calving (months) and certain other traits of first lactation.

36a Estimates of heritabilities of various monthly consecutive partial milk yield records (kg) of first lactation.

36b Estimate of heritabilities of various functions of monthly cumulative partial milk yield records (kg) of first lactation.

36c Analysis of variance of various partial lactation milk yield records (kg) on monthly consecutive basis of first lactation.

36d Analysis of variance of various partial lactation milk yield records (kg) on cumulative basis for first lactation.

37 Estimates of phenotypic, genetic and environmental correlations between 300-days' completed first lactation milk production (kg) and various monthly milk yield records (kg) of first lactation.

37a Estimates of phenotypic, genetic and environmental correlations between 300-days' completed first lactation milk production (kg) and various cumulative partial milk yield records (kg) of first lactation.
37b Estimates of phenotypic, genetic and environmental correlations between life-time milk production (kg) and various monthly milk yield records (kg) of first lactation.

37c Estimates of phenotypic, genetic and environmental correlations between average life-time milk production (kg) and various cumulative partial milk yield records (kg) of first lactation.

38 Relative efficiency of selection on the basis of partial lactation records (kg).

39 Correlations between the estimated and true additive genetic merit of a sire (sire proving with variable number of daughters and various monthly milk yield records).

39a Correlations between the estimated and true additive genetic merit of a sire (sire proving with variable number of daughters and various monthly cumulative milk yield records).

40 Selection indexes of 'series a' developed for Gir cattle and their relative efficiencies.

40a Selection indexes of 'series b' developed for Gir cattle and their relative efficiencies.

40b Selection indexes of 'series c' developed for Gir cattle and their relative efficiencies.

40c Relative economic values assigned to different traits incorporated in the selection indexes.

41 Estimates of secondary sex-ratio, twin-births, abortions, pre-mature births and still-births in Gir cattle.

42 Estimates of mean, standard error, standard deviation and coefficient of variation for birth weight (sex-wise) in Gir cattle.
