ACKNOWLEDGEMENTS

“Quality is never an accident. It is always the result of intelligent efforts.” — John Ruskin

A Sea is the combination of ponds, lakes, rivers etc. The same is the case of my thesis too which is the result of five and half years of work whereby I have been accompanied and supported by numerous people. It is a pleasant aspect that I have now the platform to express my gratitude to all of them.

Among these, the one who has played the greatest active role in my research is my supervisor at Assam University, Prof. Nandiraju V.S.Rao. It has truly been a pleasure to work under his supervision, and he has made the years I have spent in his research group highly enjoyable. He actively fosters an environment where collaboration and creativity flourish, with the end goal of accomplishing quality research. At the same time he presents a balanced picture of work and the other aspects of life. He is actively involved in the research activities of the group while giving its members the freedom to explore new ideas and avenues of research. His genuine concern for the daily progress of his students is evident. I also acknowledge his sense of humour and good-natured manner, which contribute greatly to the positive environment I have had the privilege to be a part of during these years.

The long hours at Department were made easier by the companionship and collaboration of Dr. Manoj Kumar Paul. I’ve spent countless hours discussing research and Chemistry ideas as well as life in general with him for which my couple of words will not be sufficient enough to acknowledge him.

I am greatly indebted to Prof. M.R Islam for his valuable suggestions and advice. I am greatly indebted to the fatherly assistance of Prof. S.B. Paul which flourished a unique atmosphere in my long hours at department. I am benefited greatly from the interactions with Prof. C.R Bhattacharjee, from whom I came to know about the coordination properties of d- and f-block metals with organic ligand which helped me to design and synthesize some of my target compounds. My heartfelt gratitude and thanks to Dr. Poritosh Mondal, Dr. Sk. Jashimuddin, Dr. P.C Paul, Dr. H. Acharya, Dr. D. Sengupta, , Dr. S. K Ghosh.

Very little liquid crystal research would have been accomplished without the help and guidance of Dr. S. Choudhury, who has introduced liquid crystal molecules to me, I will remain grateful to him.
I have learned a tremendous amount about liquid crystal properties from Dr. Trirup D. Choudhury and about general lab skills. I have also benefited from the experience and ideas of him. He always cheerfully made time to answer any questions that I may have had in these long span of years. My acknowledgement is due to him.

Of course nothing will function properly in our lab without our cooperative and supportive technical staff and lab attendant, I specially acknowledge to Mr. P. R Ramesh, Mr. S. Bhattacharjee, and Mr. B. Nath, Md. J. A. Borbhuiya for their help and support. I am also thankful to office staff Md. Jamil Borbhuiya for his cooperation.

I express my feelings and heartiest thanks to Dr. G. Padmaja Rani, Associate professor of Physics Department, JNTU, Kakinada for helping me to carry out dielectric studies of my synthesized materials.

I am thankful to my seniors Dr. Rajdeep Deb, Dr. Zia Uddin Majumdar, Dr. Subhash Debnath, Mr. Rahul K Nath and Mr. G. Das for helping and supporting me out through my research programme.

I have been fortunate to have excellent colleague Mr. Rahul Deb who have supported my research, food policies and perennial tea brewing. His enthusiastic discussions and critiques have been very helpful in my research career. We not only shared numerous times of discussions about our research, but also enjoyed many other outside activities as friends.

All of my group members especially Atiqur Rahman Laskar and Dipika Debnath Sarkar have given me invaluable feedback and have helped refine my work. They have been always available for discussions and have given excellent direction to my work.

I express my deep sense of gratitude and heartiest thanks to my friend Mr. Debraj Dhar Purkayastha and my junior colleagues whosoever’s contribution I feel in my thesis.

Apart from academic activities, there are lots of emotional activities related to the compiling of my thesis. I can’t deny the motherly atmosphere which I got from Mrs. Anantha Lakshmi, my heartfelt thanks to her.
I would have not been in this position without the help, support and continuous guidance of my grand-father Late Rabindranath Bhattacharjee and my maternal uncle Mr. Manik Bhattacharjee.

I owe my deep sense of gratitude and respect to my father Sri Gourapada Chakraborty and my mother Smt. Niyati Chakraborty and my father-in-law Sri Himangshu Chakraborty and mother-in-law Smt. Reba Chakraborty for their constant help and support at every stage of my academic career.

This list of people I acknowledge and thank would be very incomplete without including my dear husband Mr. Nirmalangshu Chakraborty. He brings a daily joy to my life and is a constant source of companionship and encouragement. His understanding and support have been very important to my success in my Ph D programme. No matter what circumstances lie in the future, he will always be at the top of my list of priorities.

Lopamudra Chakraborty
