

LIST OF FIGURES

Figure No.	Title of the Figure	Page No.
1.1	Location map of the meteorological centers	6
2.1	Configuration of feed forward three-layer ANN	25
2.2	Schematic diagram of node J	26
3.1	Comparison of daily ET_0 values estimated by temperature based methods against Penman-Monteith method	47
3.2	Comparison of weekly average ET_0 values estimated by temperature based methods against Penman-Monteith method	48
3.3	Comparison of monthly average ET_0 values estimated by temperature based methods against Penman-Monteith method	49
3.4	Comparison of daily ET_0 values estimated by radiation based methods against Penman-Monteith method	51
3.5	Comparison of weekly average ET_0 values estimated by radiation based methods against Penman-Monteith method	52
3.6	Comparison of monthly average ET_0 values estimated by radiation based methods against Penman-Monteith method	53
3.7	Comparison of daily ET_0 values estimated by modified Penman method against Penman-Monteith method	55
3.8	Comparison of weekly average ET_0 values estimated by modified Penman method against Penman-Monteith method	56
3.9	Comparison of monthly average ET_0 values estimated by modified Penman method against Penman-Monteith method	57
3.10	Comparison of daily ET_0 values estimated by pan evaporation based methods against Penman-Monteith method	59

3.11	Comparison of weekly average ET_0 values estimated by pan evaporation based methods against Penman-Monteith method	60
3.12	Comparison of monthly average ET_0 values estimated by pan evaporation based methods against Penman-Monteith method	61
3.13	Scatter plots of daily ET_0 values estimated by temperature based methods against Penman-Monteith method	63
3.14	Scatter plots of weekly average ET_0 values estimated by temperature based methods against Penman-Monteith method	64
3.15	Scatter plots of monthly average ET_0 values estimated by temperature based methods against Penman-Monteith method	65
3.16	Scatter plots of daily ET_0 values estimated by radiation based methods against Penman-Monteith method	68
3.17	Scatter plots of weekly average ET_0 values estimated by radiation based methods against Penman-Monteith method	69
3.18	Scatter plots of monthly average ET_0 values estimated by radiation based methods against Penman-Monteith method	70
3.19	Scatter plots of daily ET_0 values estimated by modified Penman method against Penman-Monteith method	72
3.20	Scatter plots of weekly average ET_0 values estimated by modified Penman method against Penman-Monteith method	73
3.21	Scatter plots of monthly average ET_0 values estimated by modified Penman method against Penman-Monteith method	73
3.22	Scatter plots of daily ET_0 values estimated by pan evaporation based methods against Penman-Monteith method	75
3.23	Scatter plots of weekly average ET_0 values estimated by pan evaporation based methods against Penman-Monteith method	76
3.24	Scatter plots of monthly average ET_0 values estimated by pan evaporation based methods against Penman-Monteith method	77

3.25	Scatter plots of daily ET_0 values estimated by recalibrated temperature based methods against PM ET_0 values during testing period	83
3.26	Scatter plots of weekly average ET_0 values estimated by recalibrated temperature based methods against PM ET_0 values during testing period	84
3.27	Scatter plots of monthly average ET_0 values estimated by recalibrated temperature based methods against PM ET_0 values during testing period	85
3.28	Comparison of daily ET_0 values estimated by recalibrated temperature based methods with those estimated by Penman-Monteith method during testing period	86
3.29	Comparison of weekly average ET_0 values estimated by recalibrated temperature based methods with those estimated by Penman-Monteith method during testing period	87
3.30	Comparison of monthly average ET_0 values estimated by recalibrated temperature based methods with those estimated by Penman-Monteith method during testing period	88
3.31	Scatter plots of daily ET_0 values estimated by recalibrated radiation based methods against PM ET_0 values during testing period	92
3.32	Scatter plots of weekly average ET_0 values estimated by recalibrated radiation based methods against PM ET_0 values during testing period	93
3.33	Scatter plots of monthly average ET_0 values estimated by recalibrated radiation based methods against PM ET_0 values during testing period	94
3.34	Comparison of daily ET_0 values estimated by recalibrated radiation based methods with those estimated by Penman-Monteith method during testing period	95
3.35	Comparison of weekly average ET_0 values estimated by recalibrated radiation based methods with those estimated by Penman-Monteith method during testing period	96

3.36	Comparison of monthly average ET_0 values estimated by recalibrated radiation based methods with those estimated by Penman-Monteith method during testing period	97
3.37	Scatter plots of daily ET_0 values estimated by recalibrated modified Penman method against PM ET_0 values during testing period	100
3.38	Scatter plots of weekly average ET_0 values estimated by recalibrated modified Penman method against PM ET_0 values during testing period	101
3.39	Scatter plots of monthly average ET_0 values estimated by recalibrated modified Penman method against PM ET_0 values during testing period	101
3.40	Comparison of daily ET_0 values estimated by recalibrated modified Penman method with those estimated by Penman-Monteith method during testing period	102
3.41	Comparison of weekly average ET_0 values estimated by recalibrated modified Penman method with those estimated by Penman-Monteith method during testing period	103
3.42	Comparison of monthly average ET_0 values estimated by recalibrated modified Penman method with those estimated by Penman-Monteith method during testing period	104
3.43	Scatter plots of daily ET_0 values estimated by recalibrated pan evaporation based methods against PM ET_0 values during testing period	108
3.44	Scatter plots of weekly average ET_0 values estimated by recalibrated pan evaporation based methods against PM ET_0 values during testing period	109
3.45	Scatter plots of monthly average ET_0 values estimated by recalibrated pan evaporation based methods against PM ET_0 values during testing period	110
3.46	Comparison of daily ET_0 values estimated by recalibrated pan evaporation based methods with those estimated by Penman-Monteith method during testing period	111

3.47	Comparison of weekly average ET_0 values estimated by recalibrated pan evaporation based methods with those estimated by Penman-Monteith method during testing period	112
3.48	Comparison of monthly average ET_0 values estimated by recalibrated pan evaporation based methods with those estimated by Penman-Monteith method during testing period	113
4.1	Scatter plots of daily ET_0 values estimated using Linear Regression (LR) models with those estimated by Penman-Monteith (PM) method	119
4.2	Scatter plots of weekly average ET_0 values estimated using Linear Regression (LR) models with those estimated by Penman-Monteith (PM) method	120
4.3	Scatter plots of monthly average ET_0 values estimated using Linear Regression (LR) models with those estimated by Penman-Monteith (PM) method	121
4.4	Comparison of daily ET_0 values estimated using Linear Regression (LR) models with those estimated by Penman-Monteith (PM) method during testing period	122
4.5	Comparison of weekly average ET_0 values estimated using Linear Regression (LR) models with those estimated by Penman-Monteith (PM) method during testing period	123
4.6	Comparison of monthly average ET_0 values estimated using Linear Regression (LR) models with those estimated by Penman-Monteith (PM) method during testing period	124
4.7	Scatter plots of daily ET_0 values estimated using ANN models with those estimated by Penman-Monteith (PM) method	130
4.8	Scatter plots of weekly average ET_0 values estimated using ANN models with those estimated by Penman-Monteith (PM) method	131
4.9	Scatter plots of monthly average ET_0 values estimated using ANN models with those estimated by Penman-Monteith (PM) method	132
4.10	Comparison of daily ET_0 values estimated using ANN models with those estimated by Penman-Monteith (PM) method during testing period	133

4.11	Comparison of weekly average ET_0 values estimated using ANN models with those estimated by Penman-Monteith (PM) method during testing period	134
4.12	Comparison of monthly average ET_0 values estimated using ANN models with those estimated by Penman-Monteith (PM) method during testing period	135
4.13	Comparison of daily ET_0 values estimated using LR and ANN models with those estimated by Penman-Monteith (PM) method during testing period	137
4.14	Comparison of weekly average ET_0 values estimated using LR and ANN models with those estimated by Penman-Monteith (PM) method during testing period	138
4.15	Comparison of monthly average ET_0 values estimated using LR and ANN models with those estimated by Penman-Monteith (PM) method during testing period	139
5.1	A typical crop coefficient curve	142
5.2(a)	Comparison of daily K_c values derived from PM ET_0 and lysimeter measured ET_c with those recommended in FAO 56	144
5.2(b)	Comparison of daily K_c values derived from PM ET_0 and lysimeter measured ET_c with those recommended in FAO 56	145
5.3(a)	Comparison of weekly average K_c values derived from PM ET_0 and lysimeter measured ET_c with those recommended in FAO 56	146
5.3(b)	Comparison of weekly average K_c values derived from PM ET_0 and lysimeter measured ET_c with those recommended in FAO 56	147
5.4(a)	Comparison of monthly average K_c values derived from PM ET_0 and lysimeter measured ET_c with those recommended in FAO 56	148
5.4(b)	Comparison of monthly average K_c values derived from PM ET_0 and lysimeter measured ET_c with those recommended in FAO 56	149
5.5(a)	Variation of daily K_c values	150
5.5(b)	Variation of daily K_c values	151
5.6(a)	Variation of weekly average K_c values	152

5.6(b)	Variation of weekly average K_c values	153
5.7(a)	Variation of monthly average K_c values	154
5.7(b)	Variation of monthly average K_c values	155
5.8(a)	Scatter plots of daily ET_c observed with that estimated using polynomial K_c models and PM ET_0	157
5.8(b)	Scatter plots of daily ET_c observed with that estimated using polynomial K_c models and PM ET_0	158
5.9(a)	Scatter plots of weekly average ET_c observed with that estimated using polynomial K_c models and PM ET_0	159
5.9(b)	Scatter plots of weekly average ET_c observed with that estimated using polynomial K_c models and PM ET_0	160
5.10(a)	Scatter plots of monthly average ET_c observed with that estimated using polynomial K_c models and PM ET_0	161
5.10(b)	Scatter plots of monthly average ET_c observed with that estimated using polynomial K_c models and PM ET_0	162
5.11(a)	Comparison of observed daily ET_c values with those estimated using polynomial K_c models and PM ET_0 during testing period	163
5.11(b)	Comparison of observed daily ET_c values with those estimated using polynomial K_c models and PM ET_0 during testing period	164
5.12(a)	Comparison of observed weekly average ET_c values with those estimated using polynomial K_c models and PM ET_0 during testing period	165
5.12(b)	Comparison of observed weekly average ET_c values with those estimated using polynomial K_c models and PM ET_0 during testing period	166
5.13(a)	Comparison of observed monthly average ET_c with those estimated using polynomial K_c models and PM ET_0 during testing period	167
5.13(b)	Comparison of observed monthly average ET_c values with those estimated using polynomial K_c models and PM ET_0 during testing period	168
