List of Tables

Table 2.1 Consumption Pattern of bamboo shoots in some of the countries................. 10
Table 2.2 Chemical analysis of commonly edible bamboo shoots (Bhatt et al., 2005) ...... 11
Table 2.3 HCN content of commonly edible bamboo shoot species (Choudhury et al., 2010, 2011)......................................................................................................................... 15
Table 2.4 Major traditional bamboo shoot-based foods available in different countries .... 18
Table 2.5 Comparative study on bamboo shoot drying methods (Satya et al., 2010)........ 19
Table 2.6 The nutrient analysis of thermally processed (tinned and canned) bamboo shoots (Choudhury et al., 2011)........................................................................................................... 20
Table 2.7 Detailed nutrient component comparison of fermented shoots and fresh shoots of Dendrocalamus sp (Sarangthem et al., 2005)................................................................. 23
Table 3.1 Commonly preferred edible bamboo shoot species of the north eastern states... 33
Table 3.2 Relative humidity of saturated salt solutions at 20 °C, 30°C and 35°C .............. 36
Table 3.3 Moisture sorption isotherm models fitted to the experimental data............... 37
Table 3.4 Maximum and minimum values of independent variables for drying of shoots. 41
Table 3.5 Full-factorial central composite rotatable design (CCRD) of the experimental variables for drying of bamboo shoots ................................................................. 44
Table 3.6 Mathematical models fitted to the drying data of bamboo shoots................... 45
Table 3.7 Maximum and minimum values of amount of pectin, moisture content and volume of air required for reconstitution of powder......................................................... 50
Table 3.8 Central composite rotatable design (CCRD) of the experimental values taken for reconstitution of powder ..................................................................................... 51
Table 3.9 Different levels of moisture and percent air incorporation used for rheological measurement .................................................................................................................... 52
Table 3.10 Rheological models fitted to the rheological data of bamboo shoot batter. ...... 53
Table 3.11 Full factorial CCRD for drying of the portioned batter................................ 57
Table 3.12 Score card used for sensory evaluation ...................................................... 58
Table 3.13 Triplets associated with sensory scores ..................................................... 60
Table 4.1 Composition of fresh bamboo shoot................................................................ 67
Table 4.2 Constants of isotherms models fitted to adsorption data of bamboo shoots...... 69
Table 4.3 Constants of isotherms models fitted to desorption data of bamboo shoots
Table 4.4 Properties of desorbed water in bamboo shoot
Table 4.5 Properties of adsorbed water in bamboo shoot
Table 4.6 Measured values of moisture content, crispness and color during drying of bamboo shoots
Table 4.7 Analysis of variance (ANOVA) for moisture content of the dried shoots
Table 4.8 Analysis of variance (ANOVA) for crispness of the dried shoots
Table 4.9 Analysis of variance (ANOVA) for colour of the dried shoots
Table 4.10 Experimental values of moisture content, crispness and color of the dried shoots with respect to optimum values of drying temperature and time
Table 4.11 Estimated coefficients of the fitted thin layer drying models
Table 4.12 Effective moisture diffusivity of bamboo shoots during hot air tray drying
Table 4.13 Particle size analysis of the ground powder
Table 4.14 Effect of water addition and air incorporation on yield stress, consistency coefficient and flow behavior index of the batter (Herschel-Bulkley model)
Table 4.15 Typical values of radial growth and height of the batter when placed on a galvanized iron sheet at different time of spreading and calculated value of height using Eq. (3.5)
Table 4.16 Measured values of yield stress, density and radial growth of the aerated batter
Table 4.17 Optimum values of quality parameters of the aerated batter
Table 4.18 Weight variation in weight of the samples due to portioning
Table 4.19 Measured values of quality attributes of the dried nuggets
Table 4.20 Analysis of variance (ANOVA) for moisture content of dried shoots
Table 4.21 Analysis of variance (ANOVA) for hardness of dried shoots
Table 4.22 Analysis of variance (ANOVA) for yellowness index of dried shoots
Table 4.23 Analysis of variance (ANOVA) for optimum cooking quality of dried shoots
Table 4.24 Experimental values of quality parameters of dried nuggets at optimum drying parameters
Table 4.25 Sums of sensory scores for quality attributes of the dried nuggets
Table 4.26 Similarity value of quality attributes of nuggets in general......................... 106
Table 4.27 Similarity values of quality attributes of the dried nuggets.......................... 107
Table 4.28 Similarity values of the dried nugget samples.............................................. 107
Table 4.29 Estimated values of isotherm models fitted to desorption data of the dried nuggets...................................................................................................................... 112
Table 4.30 Estimated values of isotherm models fitted to adsorption data of the dried nuggets.......................................................................................................................... 113
Table 4.31 Cost analysis for production of bamboo shoot based nuggets......................... 115
