</table>
3.7 Frequency, Percentage, Valid Percentage and Cumulative Percentage of Religious Status of respondents

3.8 Frequency, Percentage, Valid Percentage and Cumulative Percentage of Occupational Status of Respondents

3.9 AUDIT indicators: gender - gender Cross tabulation

3.10 Frequency and percentage of the age group of the individuals in the initial trial sample.

4.1 Mean, Standard Deviation and t-value, Of Males and Females respondents on the AUDIT scores

4.2 Gender Difference between High Risk Males and High Risk Females

4.3 Mean, Standard Deviation and t-value, of Males and Females respondents on the Alcohol Expectancy Scores

4.4 Number of Males and Females in the categories of Positive Expectancies

4.5 High Risk – Low Risk Gender Differences on the Mean Scores of the various positive indices of the Alcohol Expectancy Questionnaire

4.6 High Risk – Low Risk gender differences on the mean scores of Negative Expectancy

4.7 Mean, Standard Deviation and t-value, of Males and Females respondents on their stress scores

4.8 High Risk – Low Risk gender differences on the Mean Scores of the various indices of the Stress Indicators
Mean, standard deviation and t-value, of males and females respondents on the coping scores

High Risk – Low Risk gender differences on the mean scores of the various indices of the Alcohol Expectancy Questionnaire

Mean, Standard Deviation and t-value, of Males and Females respondents on the Stress and Coping Balance.

Gender Difference of the categories of Stress Coping Indicators

Mean, Standard Deviation and t-value, of Male and Female respondents on the various social cultural variables scores

High Risk – Low Risk Gender Differences on the Mean Scores of the Various Indices of Socio Cultural Influences

High Risk – Low Risk gender differences on the mean scores of Age of Initiation to alcohol consumption

Mean, Standard Deviation and t-value, of Male and Female respondents on the various social cultural variables scores

High Risk – Low Risk gender differences on the mean scores of Psycho Social Consequences of alcohol consumption

Beta coefficient, SEM, R-square and t-value of the included variables on the total AUDIT Score using the stepwise method

ANOVA assessing the overall significance of included predictor variables on the total AUDIT Score using the
4.20 Beta coefficient, SEM, R-square and t-value of the included variables on the total AUDIT Score using the stepwise method.

4.21 ANOVA assessing the overall significance of across models with dependent variable - hazardous consumption of alcohol.

4.22 Beta coefficient, SEM, R-square and t-value of the included variables on the harmful use of the AUDIT index using the stepwise method.

4.23 ANOVA assessing the overall significance of across models with dependent variable – harmful use of consumption of alcohol.

4.24 Beta coefficient, SEM, R-square and t-value of the included variables on the alcohol dependency indicator of the AUDIT using the stepwise method.

4.25 ANOVA assessing the overall significance of across models with dependent variable – alcohol dependency of the AUDIT indicator.
