

ACKNOWLEDGEMENTS

Thin film science and solar cell studies are in general a largely collaborative fields, where the efforts of many individuals are responsible for most of the developments. Such is the case for the work in this thesis, as contributions from others ranging from experimental to motivational have all been pivotal for the accomplishments herein. Below, I acknowledge some of these important contributions.

My research guide, Prof. L.P. Deshmukh, Director & Professor, School of Physical Sciences, Solapur University, Solapur, Fellow, Maharashtra Academy of Sciences, Executive Member, Indian Carbon Society, Life Member, Society for Promotion of Excellence in Electronics Discipline (SPEED), Fellow, Indian National Science Academy (INSA- Award in Physics, 1997), Fellow, The Society for Advancement of Electrochemical Science and Technology, Fellow, Semiconductor Society of India, Member, Materials Research Society of India, and Member, Institution of Electronics and Tele. Engineers has proven to be everything a student could need or want in a supervisor. He was a constant source of motivation allowing me to follow my interests while helping to direct them down fruitful paths toward the useful results. The support he provides his students - whether through academic discussions, exposure to the research community, or career path advice -always seems targeted toward one thing: wanting the best for his students and wanting to see them succeed.

I am indebted to Prof. N. N. Maldar, Hon. Vice Chancellor and Professor of Polymer Chemistry Department, Solapur University, Solapur and Professor M. Sharon, Director,

nsnRc, Mumbai, for their fruitful discussions on the subject matter of this doctoral dissertation. The research data described in this thesis have resulted in several peer-reviewed publications. In all cases the published manuscripts were the result of the combined efforts of multiple co-authors. I am indebted to these co-authors for their direct or indirect contributions to the characterizations and the fruitful discussions we shared and their assistance for the manuscript preparation.

I am grateful to Dr. Andrzej Sikora, Head, Department of Materials Science & Diagnostics, Head, Measurements & Diagnostic Section, Electrotechnical Institute Division of Electrotechnology & Materials Science, ul. M. Sklodowskiej-Curie, Wroclaw, Poland for providing me AFM and MFM measurements on all the samples.

I am also grateful to Dr. N.L. Tarwal, Assistant Professor, Department of Physics, Lal Bahadur Shastri College, Satara for providing FESEM/ EDX characterizations from Research Institute for Solar and Sustainable Energies (RISE), Gwangju Institute of Science and Technology (GIST), Gwangju, Korea. I wish to extend my sincere thanks to Dr. R.C. Kambale, Assistant Professor, Savitribai Phule Pune University, Pune, for his key role in SEM and XRD measurements.

I also feel proud to thank Dr. D.P. Dubal, Marie-Curie Fellow, Alexander von Humboldt Fellow, Germany, Catalan Institute of Nanoscience & Nanotechnology, Barcelona, Spain, for arranging XPS characterizations within a very short span of time.

A great deal of my experimental work took place at the Thin Films & Solar Studies Research Laboratory at the Solapur University, Solapur, where I shared many cheerful

and unforgettable moments. At this very-moment, I would like to express thanks to my research colleagues, Mr. P.C. Pingale, Mr. S.T. Pawar, Mr. V. Bachuwar, Mr. V. Prakshale, Mr. G.T. Chavan, Dr. J.Y. Patil, Mr. A.V. Rajgure, Mr. R.C. Ambare, Mr. R.M. Kore, Mr. R.S. Ingole and Mr. B.Y. Fugare for timely help during every step of my research work. I express my earnest thanks towards supporting staff members Prof. S.S. Suryavanshi, Dr. B.J. Lokhande, Dr. V.B. Patil and other young staff members of the School of Physical Sciences, Solapur University for their help wherever required. I also express my sincere thanks to the non-teaching staff members.

My deepest admirations from the heart corner are reserved for my family. I am very fortunate to have the parents that I do, and almost daily I am reminded of how fortunate I was to be raised in the manner I was. My father (Mr. Suresh) and mother (Mrs. Sulochana) managed to instill in me a strong motivation to succeed and a steadfast desire to determine inner workings of most things I came across.

Any success I enjoy in life is usually attributable in large part to my wife, Neeta and my daughter Sonakshi. This thesis is no exception, as they continually provided motivation whenever needed. They have also been very understanding of the time commitments required for this work, always encouraging me to work whenever I needed to.

Place: Solapur
