CHAPTER I

Introduction

1.1. Introduction	01
1.2. Dilute Magnetic Semiconductors (DMS)	03
1.2.1. History of the spin-based electronics (Spintronics)	05
1.2.2. Survey of the literature	09
1.3. The Thin Films and Thin Film Depositions: Broad Classification	15
1.3.1. Physical methods	20
1.3.2. Chemical methods	20
1.3.3. Selection of a deposition process and a chemical solution deposition route	22
1.4. The Electrochemical PV Cell	24
1.4.1. Basics of semiconductor-liquid junction	26
a) Oxidation and reduction processes	26
b) Semiconductor-electrolyte interface	28
c) Classification of the photoelectrochemical (PEC) solar cells	29
d) Requirements of electrochemical PV cells	30
e) Conversion efficiency and fill factor	33
1.4.2. Advantages of the electrochemical PV Cell	33
1.5. The CoS and $\text{Co}_{1-x}\text{Zn}_x\text{S}$ Systems: Why?	34
1.6. Problem in Brief and Proposed Plan	37
References	41

CHAPTER II

Methods and Measurements

2.1. Introduction	47
2.2. Chemical Solution Deposition	47

2.2.1	A dust proof chamber	49
2.2.2	An oil bath	50
2.2.3	The reaction vessel	51
2.2.4	The substrate holder	51
2.3.	Synthesis of CoS and Co_{1-x}Zn_xS Thin Films	52
2.3.1	The substrates	52
2.3.2	Cleaning the substrates	52
2.3.3	Preparation of the solutions	53
2.3.4	Factors regulating chemical solution deposition	53
a)	Bath composition	53
b)	The pH	54
c)	Deposition temperature	54
d)	Deposition time	54
e)	Speed of the mechanical churning	54
2.3.5	Synthesis of the CoS and Co_{1-x}Zn_xS thin films	54
2.4.	Measurements and Characterization of CoS and Co_{1-x}Zn_xS Thin Films	55
2.4.1.	The film thickness measurement	56
a)	Weight difference method	56
b)	Interference technique	56
2.4.2.	Wettability measurements	56
2.4.3.	The chemical compositional analysis	59
a)	An energy dispersive X-ray spectroscopy (EDS)	59
b)	The X-ray photoelectron spectroscopy (XPS)	60
2.4.4.	The X-ray diffraction analysis (XRD)	63
2.4.5.	The Fourier transform infrared (FTIR) spectroscopy	66
2.4.6.	The electron microscopies	68
a)	Scanning electron microscopy (SEM)	68
b)	Field emission scanning electron microscopy (FESEM)	69
c)	Atomic force microscopy (AFM)	71
d)	Magnetic force microscopy (MFM)	73
2.4.7.	Optical measurements	74
2.4.8.	The electrical transport measurements	76
a)	The electrical conductivity measurements	76

b) Thermoelectric power measurements	77
c) Photosensitivity measurements	79
2.5 The Measurements on Electrochemical Photovoltaic (PV) Cells	80
2.5.1 Electrical contacts	80
2.5.2. Design and fabrication of a PV-cell	81
a) Choice of an electrolyte	81
2.5.3. The electrical properties of a PV- cell	82
a) Current-voltage characteristics in dark	82
b) Capacitance-voltage characteristics in dark	83
c) The barrier height measurements	83
d) The power output characteristics	83
2.5.4. The optical properties of a PV- cell	83
a) Spectral response	84
b) Photo response	84
c) Transient response	84
References	85

CHAPTER III

Synthesis, Growth Mechanism, Physical Observations and Compositional Analysis of CoS and Co_{1-x}Zn_xS Thin Films

3.1. Introduction	88
3.2. Experimental Details	89
3.2.1. Alkaline bath chemical deposition (ABCD): fundamentals	89
3.2.2. Synthesis of CoS and Co_{1-x}Zn_xS thin films	90
a) Substrate preparation and cleaning	90
b) Deposition of CoS and Co _{1-x} Zn _x S thin films	90
c) Optimization of the preparative parameters	91
3.2.3. Thickness measurements	93
3.2.4. Contact angle and wettability measurements	94
3.2.5. The chemical compositional analyses	94
a) An energy dispersive X-ray spectroscopy (EDS)	94
b) The X-ray photoelectron spectroscopy (XPS)	94
3.3. Results and Discussion	95
3.3.1. Effects of growth parameters on the film growth	95

a) Solution concentrations and bath composition	96
b) Speed of the substrate rotation	96
c) Deposition temperature	97
d) Deposition time	99
e) pH of the reaction mixture	101
3.3.2. The mechanism of film formation	104
a) Simple ion-by-ion mechanism	104
b) Simple cluster (hydroxide) mechanism	104
c) Complex-decomposition ion-by-ion mechanism	105
d) Complex-decomposition cluster mechanism	105
3.3.3. The wettability studies	108
3.3.4. Thickness measurements	109
3.3.5. Physical observations	111
3.3.6. The chemical compositional analysis	111
a) An EDS analysis	111
b) The XPS analysis	116
3.4. Conclusions	125
References	131

CHAPTER IV

Structural and Microstructural Studies of CoS and Co_{1-x}Zn_xS Thin Films

4.1. Introduction	134
4.2. Experimental Details	135
4.2.1. Deposition of CoS and Co_{1-x}Zn_xS thin film samples	135
4.2.2. X-ray diffraction analysis	136
4.2.3. FTIR analysis	138
4.2.4. Electron microscopies	138
a) Scanning electron microscopy (SEM)	138
b) Field-emission scanning electron microscopy (FESEM)	139
c) Atomic force microscopy (AFM)	139
d) Magnetic force microscopy (MFM)	140
4.3. Results and Discussion	140
4.3.1. The X-ray diffraction studies	140
4.3.2. The FTIR studies	149

4.3.3. The Microscopic studies	152
a) The scanning electron microscopy (SEM)	152
b) The field-emission scanning electron microscopy (FESEM)	163
c) The atomic force microscopy (AFM)	163
d) The magnetic force microscopy (MFM)	176
4.4. Conclusions	177
References	197

CHAPTER V

The Optical and Electrical Transport Studies of CoS and Co_{1-x}Zn_xS Thin Films

5.1. Introduction	201
5.2. Experimental Details	202
5.2.1. Deposition of the samples	202
5.2.2. UV-Vis measurements	203
5.2.3. Electrical conductivity measurements	203
5.2.4. Thermoelectric power measurements	204
5.2.5. Photosensitivity measurements	204
5.3. Results and Discussion	204
5.3.1. Optical studies	204
5.3.2. The electrical conductivity studies	216
5.3.3. Thermo-power studies	224
5.3.4. The photoconductivity studies	229
5.4. Conclusions	234
References	237

CHAPTER VI

The Electrochemical Photovoltaic (PV) Studies on Co_{1-x}Zn_xS Thin Films

6.1. Introduction	241
6.2. The Fundamentals of an Electrode / Electrolyte Interface	244
6.2.1. An electrolyte side of the interface	248
6.2.2. The electrode side of the interface	251
6.2.3. The surface states and surface adsorbed ions	252
6.2.4. The differential capacitance and Mott-Schottky plots	253
6.2.5. The charge transfer mechanism across the photoelectrode-electrolyte interface	256

a) Under illumination	256
b) In dark	258
6.2.6. The cell efficiency (η)	259
6.3. Experimental Details	262
6.3.1. Deposition of the samples	262
6.3.2. Fabrication of the semiconductor/electrolyte junction PV-cell	262
6.3.3. On the electrolyte selection	262
6.3.4. Characterization of the electrochemical photovoltaic (PV) cells.	264
a) The electrical properties	264
b) The optical properties	264
6.4. Results and Discussion	265
6.4.1. The choice of an electrolyte system	266
6.4.2. Studies on the electrical properties of the PV cell	267
a) I-V characteristics in dark	267
b) C-V characteristics in dark	271
c) Built-in potential measurements	274
d) Power output characteristics	276
6.4.3. Studies on the optical properties of the PV cell	278
6.5. Conclusions	281
References	284

CHAPTER VII

Summary and Conclusions

7.1. Introduction	286
7.2. The Synthesis, Reaction Mechanism and Growth Kinetics of CoS and Co _{1-x} Zn _x S Thin Films	289
7.2.1. The reaction kinetics and growth mechanism	289
7.2.2. The compositional and elemental analysis studies	290
a) The compositional analysis (EDS)	291
b) The elemental analysis (XPS)	291
7.3. The Structural and Micro-spectroscopic Analysis of CoS and Zn(CoS) Thin Films	292
7.3.1. The structural studies	292
7.3.2. The FTIR analysis	293

7.3.3. The surface topographic studies	293
a) The scanning electron microscopy	293
b) The field emission scanning electron microscopy	294
c) The atomic force microscopy	294
d) The magnetic force microscopy	295
7.4. The Optical and Transport Properties of CoS and Co_{1-x}Zn_xS Thin Films	295
7.4.1. The optical studies	295
7.4.2. The electrical transport studies	296
7.5. The CoS and Co_{1-x}Zn_xS Electrode/ Electrolyte Based PV- Studies	297
7.5.1. The choice of an electrolyte redox couple	297
7.5.2. The electrochemical PV cell performance studies	298
7.6. Remarks	299
References	300
