Chapter 6

Figure 6.3: i, ii, iii and iv) Maximum Zone of Inhibition in diameter (in mm) 56
of the growth of *Staphylococcus aureus*, *Klebsiella pneumonia*,
*Pseudomonas species* and *E.coli* measured on standard
disks (S,C,NX & T).

Figure 6.3: v, vi and vii) Maximum Zone of Inhibition in diameter (in mm) 56
of the growth of *Pseudomonas species*, *Klebsiella pneumonia* and
*E.coli* measured on petroleum ether extract of *Eurya japonica* Thunb.

Figure 6.3: viii, ix and x) Maximum Zone of Inhibition in diameter (in mm) 57
of the growth of *Staphylococcus aureus* measured on petroleum ether
and *Pseudomonas species* and *Klebsiella pneumonia* measured on
ethyl acetate extract of *Eurya japonica* Thunb.

Figure 6.3: xi and xii) Maximum Zone of Inhibition in diameter (in mm) 57
of the growth of *Staphylococcus aureus* measured on ethyl acetate
extract and *Pseudomonas species* measured on acetone extract
of *Eurya japonica* Thunb.

Figure 6.3: xiii, xiv and xv) Maximum Zone of Inhibition in diameter (in mm) 57
of the growth of *Staphylococcus aureus* and *Escherichia coli* measured
on acetone extract and *Staphylococcus aureus* measured on ethanol
extract of *Eurya japonica* Thunb.

Figure 6.3: xvi, xvii and xviii) Maximum Zone of Inhibition in diameter (in mm) 58
of the growth of *Klebsiella pneumonia*, *Staphylococcus aureus* measured
on ethyl acetate extract of *Ficus auriculata* Lour. and *Pseudomonas
species* measured on acetone extract of *Ficus auriculata* Lour.

Figure 6.3: xix, xx and xxi) Maximum Zone of Inhibition in diameter (in mm) 58
of the growth of *Escherichia coli* measured on acetone extract and
*Escherichia coli* and *Pseudomonas species* measured on ethanol extract of *Ficus auriculata* Lour.

**Chapter 7**

Figure 7.3.1: Structure of DPPH and its reduction by an antioxidant 66

Figure 7.3.2a: Linear regression of %DPPH Scavenging Vs Concentration of the leaf extract of *Eurya japonica* Thunb. 67

Figure 7.3.2b: Linear regression of %DPPH Scavenging Vs Concentration of the leaf extract of *Ficus auriculata* Lour. 67

Figure 7.3.3a: Reducing power assay of the methanol leaf extract of *Eurya japonica* Thunb. 68

Figure 7.3.3b: Reducing power assay of the methanol leaf extract of *Ficus auriculata* Lour. 69

Figure 7.3.4: Graph showing Optical density at 510 nm Vs Concentration of Gallic acid standard (mg/ml). 71

**Chapter 8**

Figure 8.3.1a: Changes in body weight of control and treated groups of mice for the acute toxicity test of the leaf extract of *Eurya japonica* Thunb. 79

Figure 8.3.1b: Changes in body weight of control and treated groups of mice for the acute toxicity test of the leaf extract of *Ficus auriculata* Lour. 79

Figure 8.3.4:

i) Section of the Pancreas showing normal appearance of islet of Langerhans (IL) in the pancreas of the normal control group.

ii) Section of the Pancreas showing marked degeneration of islet of Langerhans (IL) in the pancreas of the diabetic control group.

iii) Section of the Pancreas showing marked regeneration of islet of Langerhans (IL) in the pancreas of the group treated with glibenclamide.

iv) & v) & vi) & vii) Pancreas section showing marked regeneration of islet of Langerhans (IL) in the pancreas of the group treated with methanol leaf extract of *Eurya japonica* Thunb. & *Ficus auriculata* Lour. (300mg/kg b.w & 600mg/kg b.w.) respectively.

Figure 8.3.4:

viii) Section of the Pancreas showing normal appearance of the pancreatic acini (PA) in the pancreas of the normal control group.
ix) Section of the Pancreas showing marked degeneration of the pancreatic acini (PA) a in the pancreas of the diabetic control group.

x) Section of the Pancreas showing marked regeneration of the normal cellular architecture of pancreatic acini (PA) in the pancreas of the group treated with glibenclamide.

xi) & xii) xiii) & xiv) Pancreas section showing marked regeneration of the cellular architecture of the pancreatic islets (PA) in the pancreas of the group treated with methanol leaf extract of Eurya japonica Thunb. & Ficus auriculata Lour. (300mg/kg b.w & 600mg/kg b.w.) respectively.

Figure 8.3.4:

xv) Section of the Liver showing normal appearance of lobules with portal traits at the vertices, central vein in the middle, sinusoid (NS) and hepatocytes (H) in the liver of normal control group.

xvi) Liver section showing dilated sinusoid (DS), necrosis (N) in the diabetic control group.

xvii) Liver section showing regenerative effects of hepatocytes and sinusoid in glibenclamide treated group.

xviii) & xix); xx) & xxi) Liver section showing regenerative effects of hepatocytes and sinusoid in treatment with methanol leaf extract of Eurya japonica Thunb. and Ficus auriculata Lour. (300mg/kg b.w & 600mg/kg b.w.) respectively.

Figure 8.3.4:

xxii) Section of the Liver showing normal appearance of lobules with portal traits at the vertices, central vein in the middle, sinusoid (NS) and hepatocytes (H) in the liver of normal control group.

xxiii) Liver section showing dilated sinusoid (DS), necrosis (N), degenerative hepatocytes (DH), vacuolization (V) in the diabetic control group.

xxiv) Liver section showing regenerative effects of hepatocytes and sinusoid in glibenclamide treated group.

xxv) & xxvi); xxvii) & xxviii) Liver section showing regenerative effects of hepatocytes and sinusoid in treatment with methanol leaf extract of Eurya japonica Thunb. and Ficus auriculata Lour. (300mg/kg b.w & 600mg/kg b.w.) respectively.
Figure 8.3.4:

xxix) Section of the normal kidney of the normal control mice revealed normal glomerulus surrounded by the Bowman’s capsule, proximal and distal convoluted tubules without any inflammatory changes.

xxx) Histopathological study of the STZ induced kidney of the diabetic mice exhibited distorted and slightly expanded glomeruli with slightly thickening glomerular basement membranes (GBMS) and mild necrosis were also noticed in some sections of convoluted tubules.

xxxi) Glibenclamide treated mice showing normalization of glomerulus, absence of inflammatory cells, improvement in basement membrane and capillaries.

xxxii) & xxxiii); xxxiv) & xxxv) The group that was treated with methanol extract of Eurya japonica Thunb. and Ficus auriculata Lour. (300 mg/kg b.w. & 600 mg/kg b.w.) respectively for 15 days showed features of healing Comparable to that of glibenclamide treated mice that is normalization of glomerulus, absence of inflammatory cells, improvement in basement membrane and capillaries.

Chapter 9

Figure 9.2.2a: Functional schematics of a) Ascending development chamber for TLC and b) TLC plate showing distances travelled by the spot and the solvent when the solvent front has nearly reached the top of the adsorbent.

Figure 9.3.1: A) Acetone extract at P.E:E.A (7:3).
B) Acetone extract at 100% P.E.
C) Ethyl acetate extract at P.E:E.A (7:3).
D) Methanol extract at P.E:E.A (7:3).
E) Petroleum ether extract at P.E:E.A (7:3).
F) Ethanol extract at 100% C.

Figure 9.3.2: A. Methanol extract at P.E:E.A (7:3).
B. Ethyl acetate extract at 100% P.E.
C. Acetone extract at 100% C.
D. Methanol extract at P.E:E.A (9:1).
