Acknowledgement

‘In the middle of difficulty lies opportunity’.

I would like to thank the Almighty for giving me the opportunity, strength, endurance and courage to go through all the ups and downs during this period of my study.

The voyage of my scientific career began under the supervision and guidance of Dr. Sukhdev Singh, Professor of Immunology, Department of Molecular Biology and Biochemistry and presently, Dean, Faculty of Live Sciences, Guru Nanak Dev University, Amritsar, for my doctoral studies. I express my utmost gratitude towards him for helping me identify my potentials as an individual personally, to being a resilient researcher professionally. His unstinted trust, care and concern added with emotional appreciation have helped me define my motivations clearly in the unworkable situations. If I stand unmoved by innumerable failures, it is because I have been powerfully impressed by his vigour for science, tireless pursuit and the urge of being distinct in identifying scientific mysteries and taking the risk of pursuing difficult yet unconventional challenges in science. I shall ever be thankful for his approachable nature which has helped me mature up both personally and professionally.

I have always been inspired by Dr. Sunil K. Arora, Professor in the Department of Immunopathology and Incharge of HIV Testing and Disease Monitoring laboratory, PGIMER, Chandigarh and his perpetual quest for science. The present work would not have been possible without his able mentorship. He gave me considerable freedom to explore and pursue topics in Immunology that interested me the most. I am in debt to him for his unwavering support, guidance and commitment to help me complete my doctoral thesis. He has been a constant source of positive energy and motivation to pursue science with detachment, dedication and determination. I was highly moved by his desire to absorb new and modern ideas while retaining much of the old basics and thereby bringing out the best of synthesis. I express my sincere thanks to him for all the pecuniary support that he has provided me with, right till the end of my doctoral research work.
I am obliged to Professor Jatinder Singh, Department of Molecular Biology and Biochemistry, Guru Nanak Dev University, Amritsar for providing continuing support, advice by his active involvement at every step of research work embodied in this thesis in particular.

I am grateful to Professor P.K. Sehajpal, Head of the Department of Molecular Biology and Biochemistry GNDU Amritsar for his help and support whenever needed.

My close friends, Dr. Vikram Dhuna, Dr. Abhishek Mohanty, and Ajay Christopher too deserve to be specially thanked for their unmeasured and unconditional help and companionship.

Besides, I have been privileged to be working with my lab-mate-cum friends for creating and maintaining a wonderful working environment in the lab. For this, I am grateful to Dr. Sachin Gupta, Dr Suvercha Bhardwaj, Dr. Shet Masih, Dr. Shivali Masih, Dr. Deepa Rana, and Dr. Anuj Singla, Rakesh, Sanjeev, Sukhwinder Singh, Anuradha Tiwari, Meenakshi Sachdeva, Rajendra Kumar, Muzafar Jan, Shallu Tomer, Ninjit Dhanota, Kshema Thakur, Annie Sodhi, Tasjeet and Gaurav Bhatia. Their constant encouragement through thick and thin and the emotional support to cheer me up has been an important factor that enabled me to complete this work.

I am extremely thankful to, Gurleen, Gurpreet, Alka, Prashansha, Navjeet, Shakun, and Aman, my lab mates in the HIV lab, for helping me with the blood samples. The unconditional assistance of lab attendant, Narinder Pal Singh and non-teaching staff Mr. Maninder Gulati is also thankfully acknowledged.

It is my pleasure to put on record the contribution of Pooja Toor, a very special friend, labmate and my soulmate, whom, I consider myself fortunate to have found during the PhD tenure. She has worked consistently and relentlessly for the completion of this work. And not to mention my son, Ekraj Singh Toor, for his patience and love that kept me going.

Also, a warm thanks to my parents-in-law, Dr. Rajeshwar Sharma and Mrs. Raman Sharma, for their valuable guidance and constant support. I would also like to extend
my gratitude to my Brother and Sister-in-law, Vikas Bali, Dr. Archana, Anupam, and Shelly for their friendly help and encouragement to boost my morale.

Without the mention of my sister, Manpreet Garcha, it would be incomplete to finish, as for her love coupled with care and protection remained a source of strength and vigour for all times gone by. In the course of my ups and downs, my brother in law, Sandeep Singh Garcha, has stood by me silently like a wall against which I could lean to find support in difficult moments. I have heartfelt thanks for him too.

I find no words that can express adequately my feelings of deepest gratitude to my role models, my father Sardar Harpreet Singh Toor and my mother Sardarni Kanwaljeet Kaur Toor, without whose ennobling love and care I could never had got this far. Their unmatched endurance and perseverance to educate me always has been the strength behind my endeavours of academic pursuits that have culminated in the form of present thesis. I owe it all to them.

Last but not the least, I do not have the slightest hesitation in stating that the study would not have seen the light of the day without the kind cooperation and consent for donation of blood by the patients and the help of the clinicians working in ART centre and DOTS centre of PGIMER, Chandigarh. I express my sincerest thanks and indebtedness to each one of them from the core of my heart.

In the end, I thank all those with whom I came in contact directly or indirectly at the GNDU, Amritsar and PGIMER, Chandigarh. It has been an enriching experience to stay with the learned fraternity of the Institutes.

(Jaideep Singh Toor)
