Pursuing a Ph.D. project is a both painful and enjoyable experience. It’s just like climbing a high peak step by step, accomplished with bitterness, hardships, frustration, encouragement and trust with so many people’s help. Though it will not be enough to express my gratitude in words to all those people who helped me, I would still like to give my thanks to all these people.

My first debt of gratitude must go to my supervisor-I Prof. N. J. Rao, Vice Chancellor, JUET, Guna. He offered me so much advice, patiently supervising me, and always guiding me in the right direction. His understanding, encouraging and personal guidance have provided a good basis for the present thesis. I’ve learned a lot from him. His wide knowledge and his logical way of thinking have been of great value for me. He provided the vision, encouragement and advice necessary for me to proceed through the doctoral program and complete my dissertation.

I am deeply grateful to my supervisor-II Dr. G. K. Agarwal, Asst. Professor, Department of Chemical Engineering, JUET, Guna, for his detailed and constructive comments, and for his important support throughout this work.

I also thank Jai Prakash Seva Sansthan for allowing me to be part of a great professional community. I am very grateful to Dr. Y. Medury, COO, Jaypee Education System, for the cooperative spirit and providing excellent working atmosphere. I express my special thanks to Prof. D. S. Hooda, Dean Research, JUET, Guna, for his consistent help and encouragement.

I wish to express my warm and sincere thanks to Prof. K. K. Tiwari, Visiting faculty, Department of Chemical Engineering, JUET, Guna, who gave me important guidance. His ideas and concepts have had a remarkable influence on my work. I would also like to thank Dr. Hari Mahalingam, Head Chemical Engineering Department, JUET, Guna for providing all the necessary facilities in the lab for conducting my experiments.

I owe my most sincere gratitude to Prof. V. G. Gaikar, Head Chemical Engineering Department, ICT, Mumbai, who gave me the opportunity to work with him in the Department of Chemical Engineering at ICT, Mumbai and gave me untiring help during my difficult moments. He introduced me to the field of modeling and simulation.
His guidance has served me well and I owe him my heartfelt appreciation. I would also thank Prof. V. V. Mahajani, Emeritus Professor, ICT, Mumbai, for his kind help regarding the procedure of my experiment.

I warmly thank Dr. Ashish Chaurasia, Asst. Professor, Department of Chemical Engineering, JUET, Guna and Dr. Raj Kumar Arya, Asst. Professor, Department of Chemical Engineering, JUET, Guna, for their valuable advice and friendly help. Their extremely valuable experiences, extensive discussions around my work and interesting explorations have been very helpful for this study. Their detailed review, constructive criticism and excellent advice during the preparation of this thesis were very helpful.

I would like to thank my friend Mr. V. K. Sachan, Asst. Professor, Department of Chemical Engineering, CSJM University, Kanpur, for getting my adsorbent characterized from IIT Kanpur. His timely help saved lot of my time and effort.

I thank D. K. Scientific Industries, Ahmadabad, for fabricating my experimental setup. They provided me with constant help and assistance whenever required. They came to my place of work many a times to rectify any faults that occurred in the proper functioning of my experimental setup.

Mr. Navneet Jatav and Mr. Tarun Bhardwaj (Lab Technicians) are thanked for their assistance with all types of maintenance problems with the experimental setup - at all times.

My special gratitude is due to my parents and my mother in-law for their unending support. Their love provided me my inspiration and was my driving force. Last but not the least I owe my loving thanks to my wife Jyoti Gupta, my daughters Diya and Poojita without their encouragement and understanding it would have been impossible for me to finish this work.

(KAUSHAL NARESH GUPTA)
