3.6.4.1 Catalase test
3.6.4.2 Oxidase test
3.6.4.3 IMViC Test
   Indole Production test
   Methyl Red (MR)
   Voges Proskauer (VP)
   Citrate Utilization

3.7 Antibiotic sensitivity test

3.8 Observation of bacterial isolates under SEM (Scanning Electron Microscope)

3.9 Testing of nodulation ability by rhizobia
   3.9.1 Seed surface sterilization and germination
   3.9.2 Gibson’s Tube Method

3.10 Nitrogenase Activity

3.11 Molecular characterization of Rhizobacteria
   3.11.1 Total DNA Isolation
   3.11.2 Agarose gel electrophoresis
   3.11.3 Primer designing
   3.11.4 PCR based amplification of 16S rDNA gene
   3.11.5 Gel elution of amplified DNA product
   3.11.6 Cloning of 16S rDNA gene
   3.11.7 Ligation of eluted DNA fragment
   3.11.8 Preparation of competent cells
   3.11.9 Transformation of the competent cells
3.11.10 Selection of the positive transformants

3.11.11 Plasmid isolation

3.11.12 Transformed colony confirmation

3.11.13 Sequencing of 16S rDNA gene

3.12 Selection of abiotic stress tolerant bacterial isolates based on three parameters

3.12.1 Salt tolerance

3.12.2 pH tolerance

3.12.3 Temperature extremes

3.13 Screening of endosulfan degrading rhizospheric microbes

3.13.1 Analysis of endosulfan metabolism by Spectrophotometric method

3.13.2 Analysis of endosulfan degradation by HPLC method

3.14 Rhizobacteria and growth of tea seedlings at different levels of pesticide in pot culture

3.14.1 Biomass of tea seedlings

3.14.2 Shoot height and leaf production

3.14.3 Root Shoot Ratio

CHAPTER: 4 RESULTS

4.1 Isolation of Rhizobia and Soil Bacteria

4.2 Isolation of Fungi

4.3 Colony and morphological characteristics of Fungi

4.4 Soil Analysis

4.5 Morphological and Biochemical characterization of Bacterial Isolates

4.6 Antibiotic Sensitivity test
4.7 Scanning Electron Microscopic observation of bacteria 84-85
4.8 Testing of nodulation ability by rhizobia 86
4.9 Nitrogenase Activity 87-88
4.10 Molecular characterization of Rhizobacteria 89-95
  4.10.1 Total DNA isolation
  4.10.2 Primer
  4.10.3 PCR amplification
  4.10.4 Cloning of amplified product in pGEM-T easy vector
  4.10.5 Transformation and screening of white colonies having the 16S rDNA gene
  4.10.6 Nucleotide sequence accession numbers
4.11 Effect of pH, temperature and salt on the growth of bacterial isolates. 95-100
4.12 Degradation of endosulfan by bacteria 100
4.13 Degradation of endosulfan by Burkholderia sp AULS-B3 101-105
4.14 Effect of Burkholderia sp. AULS-B3 and Bacillus sp. AULS-BAC on the 106-121 growth of tea seedlings at different levels of endosulfan in pot culture
CHAPTER: 5 DISCUSSION 122-135
CHAPTER: 6 SUMMARY 136-140
