CONTENTS

ABSTRACT .......................................................................................................................... i-vi

1. INTRODUCTION ........................................................................................................... 1-13
   1.1 History and Origin ....................................................................................................... 2
   1.2 Botany of the plant ..................................................................................................... 3
   1.3 Uses ............................................................................................................................. 4
   1.4 Production and international trade .............................................................................. 5
   1.5 Ecology ......................................................................................................................... 6
   1.6 Propagation and planting ............................................................................................ 6
   1.7 Management ................................................................................................................ 6
   1.8 Harvesting .................................................................................................................. 7
   1.9 Yield ............................................................................................................................. 7
   1.10 Breeding ..................................................................................................................... 7
   1.11 Major Challenges of Sesame Production in India ...................................................... 7
   1.12 Opportunities and Prospects of Sesame Production .................................................. 8
   1.13 Diseases and pests of sesame in India ........................................................................ 11
   1.14 Defense mechanisms in plants .................................................................................. 12

2. REVIEW OF LITERATURE .......................................................................................... 14-50
   2.1. Plant pathogen interaction ....................................................................................... 14
       2.1.1. Plant primary metabolism .................................................................................. 15
       2.1.2. Sink metabolism and sugar accumulation ......................................................... 16
   2.2. Antioxidant systems vis-a-vis reactive oxygen species (ROS) during plant-pathogen
       interaction .................................................................................................................... 17
       2.2.1. Singlet Oxygen (O_2) ......................................................................................... 18
       2.2.2. Superoxide radical or Superoxide radical anion (O_2^-) ........................................ 18
       2.2.3. Hydrogen peroxide (H_2O_2) .............................................................................. 19
       2.2.4. Antioxidant (AOX) machinery and defence against pathogens ....................... 20
   2.3. Research at a glance in sesame ............................................................................... 25
       2.3.1. Genetic analysis and molecular characterization in sesame .............................. 25
       2.3.2. Sequencing strategy for the *S. indicum* genome ........................................... 28
       2.3.3. Nutraceutical potentialities of sesame ............................................................... 30
   2.4. Fungal diseases of sesame ...................................................................................... 34
   2.5. Host Range of *Alternaria* spp. ................................................................................. 38
   2.6. Taxonomy and Characterization of *Alternaria* spp. ............................................... 39
   2.7. Genetic variability in plant pathogen population ...................................................... 40
   2.8. Characterization of pathogenic and genetic diversity of plant pathogens ................. 41
   2.9. Morphological Characterization ............................................................................... 42
   2.10. *Alternaria sesami* in sesame .............................................................................. 43
   2.11. Biocontrol studies in sesame ............................................................................... 45
   2.12. *In vitro* culture studies in sesame against pathogens ........................................... 47
3. SCOPE OF THE PRESENT STUDY .................................................................51-54

4. MATERIALS AND METHODS................................................................. 55-115
  4.1. Plant Materials ....................................................................................55
  4.2. Isolation and identification of the pathogen ........................................57
  4.3. Histochemical Localization ................................................................58
        4.3.1. Localization of superoxide anions (O$_2^-$) ......................... 58
        4.3.2. Localization of hydrogen peroxide (H$_2$O$_2$) .................... 58
        4.3.3. Localization of lignin ...............................................................59
        4.3.4. Localization of peroxidase .......................................................59
  4.4. Electron microscopy ...........................................................................60
        4.4.1. Scanning electron microscopy (SEM) of leaf samples ............60
        4.4.2. Transmission electron microscopic (TEM) analysis ..............61
  4.5. Analytical methods ...........................................................................63
        4.5.1. Quantification of superoxide anions (O$_2^-$) .........................63
        4.5.2. Quantification of hydrogen peroxide (H$_2$O$_2$) ...................63
        4.5.3. Quantification of lipid peroxidation (LPX) .............................64
        4.5.4. Quantification of primary metabolites .....................................65
        4.5.5. Total Pigments ........................................................................66
        4.5.6. Quantification of total phenol ..................................................67
        4.5.7. Potassium leakage .................................................................70
        4.5.8. Cell wall composition analysis ...............................................70
        4.5.9. FT-IR spectroscopy ..................................................................72
  4.6. Isolation and assay of antioxidant enzymes .......................................73
        4.6.1. NADPH oxidase (NOX) ............................................................73
        4.6.2. Superoxide dismutase (SOD) ..................................................74
        4.6.3. Catalase (CAT) .......................................................................76
        4.6.4. Peroxidase (POX) ..................................................................76
  4.7. Isolation and assay of H+ -ATPase ......................................................78
  4.8. Isolation and assay of phenylalanine ammonia lyase (PAL) ................78
  4.9. Extraction and assay of polyphenol oxidase (PPO) .............................79
  4.10. Isozyme analysis ..............................................................................80
  4.11. Extraction and assay of antioxidants and antioxidant enzymes of ascorbate-gluathione cycle .................................................................83
        4.11.1. Quantification of ascorbate (Asc) and dehydroascorbate (DHA) 83
        4.11.2. Estimation of reduced glutathione (GSH) and oxidized glutathione (GSSG) 83
        4.11.3. Extraction and assay of antioxidant enzymes ................. 84
  4.12. Isolation and assay of Endonuclease ...............................................86
  4.13. Molecular .......................................................................................87
        4.13.1. Random Amplification of Polymorphic DNA (RAPD) .........87
  4.14. Oil content (%) ..............................................................................92
  4.15. Differential Display Reverse Transcription (DDRT) .......................92
  4.16. Plant extracts/microbe based fungicides .......................................97
5. RESULTS AND DISCUSSION ........................................... 116-196

5.1. Isolation and identification of *Alternaria sesami* ............................................ 116
5.2. Scanning electron microscopic (SEM) analysis .................................................. 117
5.3. Histochemical localization .................................................................................. 119
  5.3.1. Superoxide anion (O$_2^-$) ........................................................................... 119
  5.3.2. Hydrogen peroxide (H$_2$O$_2$) .................................................................. 119
5.4. Analysis of superoxide anion and hydrogen peroxide (O$_2^-$ and H$_2$O$_2$) ........ 120
5.5. Lipid Peroxidation (LPX) .................................................................................. 122
5.6. Transmission electron microscopic analysis (TEM) ............................................ 123
5.7. Changes in the primary metabolites .................................................................... 124
  5.7.1. Carbohydrate content ............................................................................... 124
  5.7.2. Protein, free amino acid and proline content ............................................. 126
5.8. Pigment content .................................................................................................. 127
5.9. Total phenol content (TPC) ................................................................................ 129
5.10. Changes in Cell wall composition ...................................................................... 132
  5.10.1. Potassium leakage, cellulose, hemicellulose and pectin composition changes ... 132
  5.10.2. Lignin localisation ..................................................................................... 135
  5.10.3. Lignin content .......................................................................................... 136
5.11. FT-IR analysis .................................................................................................... 137
5.12. Enzymes of ROS production .............................................................................. 141
  5.12.1 Activity of NADPH oxidase (NOX) ............................................................ 141
  5.12.2. Superoxide Dismutase (SOD) ................................................................. 142
5.13. Enzymes of ROS scavenging .............................................................................. 143
  5.13.1. Catalase (CAT) ....................................................................................... 144
  5.13.2. Peroxidase (POX) ................................................................................... 144
5.14. H$^+$-ATPase activity ........................................................................................ 147
5.15. Activities of PAL and PPO ................................................................................. 149
5.16. Isozyme pattern .................................................................................................. 151
5.17. Antioxidants and enzymes of ascorbate - glutathione cycle. ......................... 154
  5.17.1. Ascorbate and glutathione content .......................................................... 154
5.18. Endonuclease activity ......................................................................................... 161
5.19. Molecular polymorphism in sesame varieties .......................................................... 162
   5.19.1. Random amplification of polymorphic DNA (RAPD) analysis ............................ 162
   5.19.2. DDRT analysis ..................................................................................................... 167
   5.19.3. Oil content .......................................................................................................... 169
   5.19.4. H₂O₂ content .................................................................................................... 170
5.20. Plant extracts/microbes based fungicidal potentiality ...................................................... 171
   5.20.1. In vitro screening ................................................................................................ 171
   5.20.2. Mikania scandens extract as fungicide ............................................................... 172
   5.20.3. Salvinia molesta extract as fungicide ................................................................. 181
   5.20.4. Pseudomonas fluorescens (Pfl) as biocontrol agent ............................................. 187
5.21. Parameters related with pot and field studies .................................................................... 193

6. CONCLUSION AND FUTURE OUTLOOK ................................................................. 197-204

7. REFERENCES ............................................................................................................. 205-234
