List of Figures

2.1 A few wavelets obtained from the Mexican hat mother wavelet
Ψ(x) = (1 − 2x^2)e^{-x^2} ............................................. 13
2.2 Basis functions and the time-frequency tilings of the short time
Fourier and the wavelet transform .................................... 16
2.3 Meyer wavelet Ψ(x) and scaling function Φ(x), and amplitudes of
their Fourier transforms |Ψ(ω)| and |Φ(ω)|. .......................... 20
2.4 A fast orthogonal DWT: a decomposition (a), and a reconstruction
(b) step. It is a filter bank algorithm: the lowpass and the highpass
filters are followed by the down sampling by 2; at the reconstruction
the up sampling by 2 precedes the filtering. ......................... 22
2.5 Two dimensional DWT. A decomposition step (a) and the usual
organization of the subbands (b). ................................. 23
2.6 An image (a) and its 2D DWT (b). Black pixels denote large mag­
nitude wavelet coefficients. ........................................... 24
2.7 An example of the redundant wavelet frame decomposition in three
resolution levels. From left to right are represented lowpass images
and detail images in LH, HL and HH subbands, respectively. .... 25
2.8 Examples of Daubechies dbNv and Symlet symNv scaling functions
and wavelets. ...................................................... 27
2.9 An example of spline biorthogonal wavelets and scaling functions
of compact support of [41], with Nv = 7, Nh = 3. ................. 27
2.10 The cubic spline smoothing function θ(x) (left) and its first deriva­
tive, the quadratic spline wavelet [59] Ψ(x) (right). ............... 28
2.11 Decomposition of the non-decimated wavelet transform with two
orientation subbands. ................................................. 30
2.12 Reconstruction of the non-decimated wavelet transform with two orientation subbands ................................. 30

2.13 Illustration of 1-D bilateral filter. The filter is applied on a 1-D step signal noised by random Gaussian noise. The output of the figure is shown in the bottom figure. ........................................... 36

3.1 Hard Thresholding .................................................. 46
3.2 Soft Thresholding ................................................. 47
3.3 Model No. 1 ......................................................... 53
3.4 Model No. 2 ......................................................... 53
3.5 Model No. 3 ......................................................... 54
3.6 Category I .......................................................... 55
3.7 Category II .......................................................... 55
3.8 Category III ......................................................... 56
3.9 Model No. 4 ......................................................... 57
3.10 Model No. 5 ......................................................... 58
3.11 Model No. 6 ......................................................... 58
3.12 Model No. 7 ......................................................... 58
3.13 Model No. 8 ......................................................... 59
3.14 Model No. 9 ......................................................... 59
3.15 Model No. 10 ....................................................... 59
3.16 Model No. 11 ....................................................... 60
3.17 Model No. 12 ....................................................... 60
3.18 Model No. 13 ....................................................... 60
3.19 Model No. 14 ....................................................... 61
3.20 Model No. 15 ....................................................... 61
3.21 Model No. 16 ....................................................... 61
3.22 Model No. 17 ....................................................... 62
3.23 Model No. 18 ....................................................... 62
3.24 Model No. 19 ....................................................... 62
3.25 Model No. 20 ....................................................... 63
3.26 Model No. 21 ....................................................... 63
3.27 Model No. 22 ....................................................... 64
3.28 Model No. 23 ................................................. 64
3.29 Model No. 24 ................................................. 64
3.30 Model No. 25 ................................................. 65
3.31 Model No. 26 ................................................. 65
3.32 Model No. 27 ................................................. 65
3.33 Model No. 28 ................................................. 66
3.34 Model No. 29 ................................................. 66
3.35 Model No. 30 ................................................. 66
3.36 Model No. 31 ................................................. 67
3.37 Model No. 32 ................................................. 67
3.38 Model No. 33 ................................................. 67
3.39 Model No. 34 ................................................. 68
3.40 Model No. 35 ................................................. 68
3.41 Model No. 36 ................................................. 69
3.42 Model No. 37 ................................................. 69
3.43 Model No. 38 ................................................. 70
3.44 Model No. 39 ................................................. 70
3.45 Model No. 40 ................................................. 70
3.46 Model No. 41 ................................................. 71
3.47 Model No. 42 ................................................. 71
3.48 Model No. 43 ................................................. 71
3.49 Model No. 44 ................................................. 72
3.50 Model No. 45 ................................................. 72
3.51 Model No. 46 ................................................. 72
3.52 Model No. 47 ................................................. 73
3.53 Model No. 48 ................................................. 73
3.54 Model No. 49 ................................................. 73
3.55 Model No. 50 ................................................. 74
3.56 Model No. 51 ................................................. 74
3.57 Performance Comparison of the best six models in terms of PSNR . 91
3.58 Performance Comparison of the best six models in terms of IQI . 91
3.59 Performance Comparison of the best six models with respect to Lena 92
3.60 Performance Comparison of the best six models with respect to Barbara ........................................ 93
3.61 Performance Comparison of the best six models with respect to Einstein ........................................ 93
3.62 Performance Comparison of the best six models with respect to Pyramid ....................................... 94
3.63 Performance Comparison of the best six models with respect to Astro1 ........................................... 94
3.64 Performance Comparison of the best six models with respect to Astro2 ........................................... 95

4.1 Model No. 1 ......................................................... 105
4.2 Model No. 2 ......................................................... 105
4.3 Model No. 3 ......................................................... 106
4.4 Model No. 4 ......................................................... 106
4.5 Model No. 5 ......................................................... 106
4.6 Model No. 6 ......................................................... 107
4.7 Denoised images by Model 1: Upper row is without FPGA and Lower row is with FPGA ......................... 110
4.8 Denoised images by Model 2: Upper row is without FPGA and Lower row is with FPGA ......................... 111
4.9 Denoised images by Model 3: Upper row is without FPGA and Lower row is with FPGA ......................... 111
4.10 Denoised images by Model 4: Upper row is without FPGA and Lower row is with FPGA ......................... 111
4.11 Denoised images by Model 5: Upper row is without FPGA and Lower row is with FPGA ......................... 112
4.12 Denoised images by Model 6: Upper row is without FPGA and Lower row is with FPGA ......................... 112
4.13 Performance comparison of the models with and GA optimization in terms of PSNR ................................. 113
4.14 Performance comparison of the models with and GA optimization in terms of IQI ................................... 113
5.1 Fuzzy Logic System (FLS) .................................. 118
5.2 FL based Threshold Function ................................. 120
5.3 Model with Fuzzy Soft Thresholding Function and Bilateral Filter .......................... 122
5.4 Performance Comparison of two models with fuzzy and wavelet soft thresholding in terms of PSNR .............................................. 124
5.5 Performance Comparison of two models with fuzzy and wavelet soft thresholding in terms of IQI ................................. 124
5.6 Lena: a - original image, b - noisy image, c - denoising using fuzzy soft threshold, d - denoising by wavelet soft threshold. .................. 125
5.7 Barbara: a - original image, b - noisy image, c - denoising using fuzzy soft threshold, d - denoising by wavelet soft threshold. ..... 125
5.8 Einstein: a - original image, b - noisy image, c - denoising using fuzzy soft threshold, d - denoising by wavelet soft threshold. ..... 125
5.9 Pyramid: a - original image, b - noisy image, c - denoising using fuzzy soft threshold, d - denoising by wavelet soft threshold. ..... 125
5.10 Astro1: a - original image, b - noisy image, c - denoising using fuzzy soft threshold, d - denoising by wavelet soft threshold. ............... 126
5.11 Astro2: a - original image, b - noisy image, c - denoising using fuzzy soft threshold, d - denoising by wavelet soft threshold. ............... 126
