ACKNOWLEDGMENTS

It is a pleasure to acknowledge my greatest debt of gratitude to Professor B.R. Bhat who supervised the research work which this thesis embodies. I consider myself fortunate in receiving from him a benevolent interest in the pursuit of my research and in having many hours of stimulating discussions. I am also grateful to my teachers who moulded my thinking and spurred my academic interest.

My thanks are due to Bangaloro University for granting me fellowship, and also to the Karnatak University and in particular to its Statistics Department for the research facilities made available to me.

Grateful thanks are due also to my colleagues and friends, in particular, Mr. H. B. Shrostha, Mr. A. S. Kadi and Dr. S. T. Hiroemath for their help, and to Mrs. P. S. Desai in appreciation of her careful and neat typing of this thesis.

I am indebted to my parents, my son Shroyas, wife Janhevi and her parents all of whom shouldered additional responsibilities and demanded so little of my time during my stay in Dharwad.

H. J. Vaman.
