DETAILLED SYNOPSIS

INTRODUCTION

PART ONE

FOOD SITUATION IN INDIA

HISTORICAL SURVEY

CHAPTER I - THE PERIOD BEFORE THE SEPARATION OF BURMA. 1 - 15

The period before 1920. Lack of data and two schools of thought. Foreign trade in foodgrains - rice imports, unsteady movements, price differential, Crop Planning Sub-Committee (1934) and restrictions on bringing new areas under rice, world demand, real position; Wheat position, imports, exports, world market, Wheat Conference. Conclusion.

CHAPTER II - SEPARATION OF BURMA AND THE SECOND WORLD WAR. 16 - 37

CHAPTER III - PARTITION AND THEREAFTER. 38 - 57

CHAPTER IV - THE DECONTROL.

Change in food policy. Madras experiment. Working of decontrol. Conclusion, part played by nature, the real position.

PART TWO

THE FOOD POTENTIAL

CHAPTER V - REJUVINATING AGRICULTURE.

Depressed agricultural production. Decline in yields - bogey of soil exhaustion, the cultivator, possible explanation. Unreliable data - past position, intentional underestimation, future outlook. Determinants of agricultural production - exogenous and endogenous factors. Endogenous factors - land, labour, capital and organization. Exogenous factors - land policy, recent reforms, peasant farming, future policy; size of holdings, consolidation of holdings and its advantages, case for small holdings, saving in time and cost not of much consequence, income per cultivator, nature of farming, examples of other countries, inheritance laws, conclusion; communications and marketing, village communities and the British, communications, effect on agricultural production, railways, roads, marketing; agricultural finance, credit needs, present position, future outlook; prices and production, production hardly related to price, falling prices, rising prices, conclusion. Summing up.

CHAPTER VI - EXTENSIVE CULTIVATION AND SOIL CONSERVATION.

CHAPTER VII - WATER AND MANURIAL RESOURCES.

Total area with adequate water supply - rainfall, irrigation, intensive areas for each of the feed crop. Manurial potential - farm yard manure, cattle dung, ashes from burnt dung, total from cattle dung, cattle urine, litter, other livestock, village waste, rub system, total livestock potential; human waste, rural India, urban India, sewage and silage; Bone meal; Total animal and human resources; Green manure; Inorganic fertilizers, existing fertilizer capacity, nitrogenous fertilizers, phosphates and potassic fertilizers; Over all picture. Crop requirements and the outlook.

CHAPTER VIII - RICE.

Environmental conditions, soil, climate, water. Improved seed. Cultural and agronomic operations. Manures and fertilizers, economies of manures. Japanese Method of Rice Cultivation, the method, achievements. Future possibilities of applying the Japanese Method, the peasant, his prejudice and poverty, total potential.

CHAPTER IX - WHEAT.

Place in the food economy of the country. Conditions of favourable growth, soil, climate, water. Effect of improved seed, manures and better practices, seed, diseases and insect pests, manures, rotation and mixed cropping. Irrigated areas. Dry areas. Total wheat potential.

CHAPTER X - COARSE GRAINS AND GRAM.

CHAPTER XI - TOTAL FOOD POTENTIAL.

Total cereal potential, the limitations, subsidiary foods. The Law of Diminishing Returns, implications, application to Indian agriculture. Dynamism of Indian economy.

PART THREE
MAN AND FOOD RELATION

CHAPTER XII - POPULATION TRENDS AND OUTLOOK.

CHAPTER XIII - FOOD CONSUMPTION LEVELS

Nutritional standards. Early calculations. Existing inadequacy of data. Consumption levels of different cereals - rural India, agricultural labour, National Sample Survey; consumption ratios between different cereals; Urban India, industrial labour, other urban areas; All India consumption pattern. Quantity of cereals consumed - urban areas, industrial labour, calculations on the basis of rationing offtake and National Sample Survey; Rural India, three important surveys; Cereal consumption in 1961.
CHAPTER XIV - FUTURE CEREAL REQUIREMENTS AND OUTLOOK. 277-293

Food consumption and standard of living, qualitative and quantitative aspects. Economic development and food consumption - quantitative change, quality of food. Future requirements - human consumption; Other uses, processed foods, animal feed, seed and wastages; Overall picture. Marketable surplus.

CHAPTER XV - CONCLUSION. 294-299

APPENDICES. 300-340
