List of tables

Chapter-1: General Introduction to liquid crystal

Table 1.1: Important liquid crystal discoveries.......................................................... 5
Table 1.2: Structural Classification of smectic liquid crystals....................................... 7
Table 1.4: Banana phase structures and properties of bent-core molecules............... 20

Chapter-2: Review of literatures

Table 2.1: Comparison of the mesophases shown by compounds containing different types of terminal chains................................................................. 39
Table 2.2: Influence of direction of ester linkage on mesophase behaviour................. 40
Table 2.3: Effect of substituents on seven-ring banana shaped mesogens.................... 48
Table 2.4: Effect of substituents on naphthalene core banana shaped mesogens........... 50
Table 2.5: Chemical structure and mesophase behaviour of bent core four ring mesogens........................................................................................................... 52

Chapter-3: Experimental: Materials and method

Table 3.1: Loss factor (tanδ) of different solvents...................................................... 71

Chapter-4: Un-symmetrical Four-ring Bent Core Mesogens

Table 4.1: Transition temperatures, enthalpies and entropies of homologous series RN-n................................................................. 112

Chapter 5: Unsymmetrical Four-ring Bent Core Mesogens: Influence of Polar substituents on mesomorphism

Table 5.1: Transition temperatures, enthalpies and entropies of homologous series RN-n-6'F................................................................. 138
Table 5.2: Transition temperatures, enthalpies and entropies of homologous series RN-n-4'Cl................................................................. 151

Chapter 6: Unsymmetrical Four-ring Bent Core Mesogens: Influence of methyl substituent on mesomorphism

Table 6.1: Modified Structures of central bent core unit with a substituent................. 163
Table 6.2: Transition temperatures obtained from differential scanning calorimetry at a scan rate of 5°C/min in 2nd heating and cooling data for RN-6-2'Me ................................................................. 165
Table 6.3: Transition temperatures obtained from differential scanning calorimetry at a scan rate of 5°C/min in 2nd heating and cooling data for RN-8-2'Me ................................................................. 173
Table 6.4: Transition temperatures, enthalpies and entropies of homologous series RN-n-2'Me ................................................................................................. 176
Table 6.5: Structure - mesomorphism relationship...................................................... 194
Table 6.6: Absorption and emission characteristic of substituted 4-ring systems... 195
