CONTENTS

CHAPTER I
Introduction
1.1 Metal complexes of Schiff base ligands 1
1.1.1 Metal complexes of thiosemicarbazone ligands 2
1.1.2 Metal complexes of aroylhydrazone ligands 4
1.2 Cyclometallation reactions 6
1.3 Present status of metal–carbonyl and metal–phosphorus/arsenic ligands 7
1.4 Catalytic organic transformations 8
1.4.1 Transfer hydrogenation reaction 8
1.4.2 Aldehyde to amide conversion 10
1.4.3 Mizoroki–Heck reaction 12
1.4.4 Buchwald–Hartwig reaction 14
1.5 Literature survey 16
1.5.1 Ruthenium complexes 16
1.5.2 Palladium complexes 25
1.6 References 34

CHAPTER II
Ruthenium(II) mediated C–H activation of substituted acetophenone thiosemicarbazones: Synthesis, structural characterization, luminescence, electrochemical properties and catalytic transfer hydrogenation of ketones
2.1 Introduction 45
2.2 Experimental 48
2.3 Results and discussion 53
2.4 References 73

CHAPTER III
Ruthenium(II) carbonyl complexes containing benzhydrazone ligands: Synthesis, structure, luminescence, electrochemistry and facile one-pot conversion of aldehydes to amides
3.1 Introduction 77
3.2 Experimental 80
CHAPTER IV
Synthesis, structural characterization, electrochemistry and catalytic transfer hydrogenation of ruthenium(II) carbonyl complexes containing tridentate benzoylhydrazone ligands

4.1 Introduction
4.2 Experimental
4.3 Results and discussion
4.4 References

CHAPTER V
Catalytic application of dinuclear palladium(II) bis(thiosemicarbazone) complexes in the Mizoroki–Heck reaction

5.1 Introduction
5.2 Experimental
5.3 Results and discussion
5.4 References

CHAPTER VI
Synthesis, structure and characterization of palladium(II) thiosemicarbazone complexes: Application to the Buchwald–Hartwig amination reaction

6.1 Introduction
6.2 Experimental
6.3 Results and discussion
6.4 References
