Acknowledgements

I am grateful to Dr. R. D. Kanamadi, who allowed me to work on a research problem of my curiosity, in his laboratory. So also, I thank my lab mates Sri. N. S. Patil and Sri. Girish Kadadevaru, who helped me and who co-operated with me always, in all ways. In the same way, I express my sincere thanks to all the research scholars, non-teaching staff and teaching staff of the department of zoology, Karnataka University, Dharwad, for their timely help and co-operation, during the period of research work, and for their affection and kindness towards me. In the same way I like to thank chairmans of the department, present (Prof. S. A. Nevagi) and previous ones.

Special thanks are due to Sri. Ramesh Ritti, for his help in setting the laboratory for rearing the tadpoles, Dr. B. B. Kaliwal for providing me a camera for photomicrography, Sri. Manohar Patil for his assistance in photography, and M. B. Hiremath for computer work, and more than that, for being my frankly speaking friend.

I put ‘a heavy weight of mine’ on my parents and family members, for a long time. They never loosened their patience and constantly supported me and encouraged me, till completion of this research work, as they ever did with me. So also my heartfelt thanks are there for my friends (especially Mr. Ravi Havinale) who showed affection towards me, visiting me often and encouraging me constantly, during the research work.

The toads because of death of whose embryos and larvae, this thesis came into existence, always remain in my memory, at least at a corner. I feel that I treated them with kindness and respect, with my opinion that they are also creatures like us.

(Mahantesh Bisnal)
