Aims and Objectives
AIMS AND OBJECTIVES

1. To identify the type of structural chromosome abnormality in couples with history of early pregnancy loss.

2. To identify the level of DNA damage in couples with history of early pregnancy loss and basal DNA damage in controls of the same age group.

3. To identify the level/index of micronuclei frequency in the said couples.

4. To compare the level of DNA damage seen in cases with healthy controls of the same age group.

5. To correlate the level of DNA damage with structural chromosomal abnormalities seen in couples with pregnancy loss.

6. To correlate the level of DNA damage with structural chromosomal abnormalities and the frequency of micro nuclei in the said couples.
