ACKNOWLEDGEMENTS

First of all I would like to offer my tribute to my beloved teacher and former research supervisor late Dr. V. Shripathi who left us too early. His innovative ideas, enthusiasm and the love towards research, motivated me to complete this work in spite of his absence in this world. Secondly I would like to offer my tribute to my beloved teacher, late Dr. R. R. Hegde who motivated me with several challenging questions to come out with a work useful in understanding the nature.

I would like to express my sincere gratitude to my research supervisor Dr. G. R. Hegde, for his enthusiasm and interest towards my topic and the constant support in a stage when I had lost all my hopes of completing this work. It is difficult to put in words about his ideas in interpreting the data, his keenness in plant diversity, taxonomy and forest ecology.

I owe much to my most beloved teacher Dr. M. D. Subash Chandran, who despite his busy schedule, showed interest in my study, gave his excellent ideas in the field of forest ecology, ecological history of Western Ghats, plant taxonomy, and identification techniques for evergreen forest trees.

I would like to acknowledge my sincere thanks to Dr. T. V. Ramachandra, Centre for Ecological Sciences (CES), Indian Institute of Science, Bangalore for providing the infra-structural facility and moral support. I wish to acknowledge the support and encouragement of Mr. G. R. Rao, Mr. Samir Ali, Mr. Kartik Dr. K. V. Gururaj and Mr. Lakshminarayan of CES, Field station Kumta. Special thanks to Mr. Vishnu D.M. of CES who accompanied me to every corner of the Sharavathi River basin throughout the study period, without him it would have been impossible for me to complete this work.
It is my privilege to express my gratitude to Dr. S.D. Kholkute, O-i-C and Sr. Grade Deputy Director, Regional Medical Research Centre (ICMR), Belgaum, without whose encouragement I would not have completed the thesis in time. My sincere thanks to Dr. Harsha Hegde, Research Officer, Mr. Vinayak and Mr. Shankar, for their valuable help and support.

I thank my close friend Prakash Mesta, who encouraged and helped me a lot in giving shape to the thesis.

I am grateful to Mr. Ravindra G. Kulkarni, my lab-mate for his care and great support. I am also thankful to all colleagues, the teaching and non-teaching staff for their help and encouragement.

I extend my sincere thanks to the present Chairman, Dep. Of Botany, Dr. Niranjan Moorthy and the former Chairmans for their help during my study.

I am grateful to my mother, for her love, affection and encouragement. I also express my gratitude to all my brothers and sisters, my relatives, friends for their help and encouragement in every aspect.

The last but the most important is my wife Dr. Vaishali, who bear all the pains and problems of the family throughout my study period. In spite of her busy schedule of taking care of Chinmay, she has been a pillar of strength and support; went through the drafts several times and gave valuable suggestions.

Finally, I wish to express my sincere thanks to all those, who helped me directly or indirectly in completing this task.

Dharwad
February, 2008. Divakar K. Mesta
