Fig. 1 showing varied growth of black gram plants raised in 0, 2.5, 5.0, 7.5, 10, 15, 20, 25, 30, 40, 50 and 75 PSR doses of partly decomposed (front row) and *E. fetida* exposed (back row) sheep droppings after 30 days of seed sowing.

Fig. 2 showing varied growth of black gram plants raised in 0, 2.5, 5.0, 7.5, 10, 15, 20, 25, 30, 40, 50 and 75 PSR doses of partly decomposed (front row) and *E. fetida* exposed (back row) sheep droppings after 60 days of seed sowing.
Fig. 3 showing varied growth of black gram plants raised in 0, 2.5, 5.0, 7.5, 10, 15, 20, 25, 30, 40, 50 and 75 PSR doses of partly decomposed (front row) and *L.mauritii* exposed (back row) sheep droppings after 30 days of seed sowing.

Fig. 4 showing varied growth of black gram plants raised in 0, 2.5, 5.0, 7.5, 10, 15, 20, 25, 30, 40, 50 and 75 PSR doses of partly decomposed (front row) and *L.mauritii* exposed (back row) sheep droppings after 60 days of seed sowing.
Fig. 5 showing varied growth of black gram plants raised in 0, 2.5, 5.0, 7.5, 10, 15, 20, 25, 30, 40, 50 and 75 PSR doses of partly decomposed (front row) and *E.fetida* exposed (back row) press mud after 30 days of seed sowing.

Fig. 6 showing varied growth of black gram plants raised in 0, 2.5, 5.0, 7.5, 10, 15, 20, 25, 30, 40, 50 and 75 PSR doses of partly decomposed (front row) and *E.fetida* exposed (back row) press mud after 60 days of seed sowing.
Fig. 7 showing varied growth of black gram plants raised in 0, 2.5, 5.0, 7.5, 10, 15, 20, 25, 30, 40, 50 and 75 PSR doses of partly decomposed (front row) and \textit{L.mauritii} exposed (back row) press mud after 30 days of seed sowing.

Fig. 8 showing varied growth of black gram plants raised in 0, 2.5, 5.0, 7.5, 10, 15, 20, 25, 30, 40, 50 and 75 PSR doses of partly decomposed (front row) and \textit{L.mauritii} exposed (back row) press mud after 60 days of seed sowing.
Fig. 9 showing varied growth of black gram plants raised in 0, 2.5, 5.0, 7.5, 10, 15, 20, 25, 30, 40, 50 and 75 PSR doses of partly decomposed (front row) and *E. fetida* exposed (back row) *Pongamia* leaves after 30 days of seed sowing.

Fig. 10 showing varied growth of black gram plants raised in 0, 2.5, 5.0, 7.5, 10, 15, 20, 25, 30, 40, 50 and 75 PSR doses of partly decomposed (front row) and *E. fetida* exposed (back row) *Pongamia* leaves after 60 days of seed sowing.
Fig. 11 showing varied growth of black gram plants raised in 0, 2.5, 5.0, 7.5, 10, 15, 20, 25, 30, 40, 50 and 75 PSR doses of partly decomposed (front row) and *L.mauritii* exposed (back row) *Pongamia* leaves after 30 days of seed sowing.

Fig. 12 showing varied growth of black gram plants raised in 0, 2.5, 5.0, 7.5, 10, 15, 20, 25, 30, 40, 50 and 75 PSR doses of partly decomposed (front row) and *L.mauritii* exposed (back row) *Pongamia* leaves after 60 days of seed sowing.
Fig. 13 showing varied growth of black gram plants raised in 0, 2.5, 5.0, 7.5, 10, 15, 20, 25, 30, 40, 50 and 75 PSR doses of partly decomposed (front row) and *E.fetida* exposed (back row) organic mixtures after 30 days of seed sowing.

Fig. 14 showing varied growth of black gram plants raised in 0, 2.5, 5.0, 7.5, 10, 15, 20, 25, 30, 40, 50 and 75 PSR doses of partly decomposed (front row) and *E.fetida* exposed (back row) organic mixtures after 60 days of seed sowing.
Fig. 15 showing varied growth of black gram plants raised in 0, 2.5, 5.0, 7.5, 10, 15, 20, 25, 30, 40, 50 and 75 PSR doses of partly decomposed (front row) and *L.mauritii* exposed (back row) organic mixtures after 30 days of seed sowing.

Fig. 16 showing varied growth of black gram plants raised in 0, 2.5, 5.0, 7.5, 10, 15, 20, 25, 30, 40, 50 and 75 PSR doses of partly decomposed (front row) and *L.mauritii* exposed (back row) organic mixtures after 60 days of seed sowing.
