Acknowledgments

In the life span of human beings, the process of thinking tend to diffuse once formal education is over. Small percentage of people, however, will be fortunate to be in the academic and research sector whose only kit for survival is 'thinking'. Thanks to the Almighty for placing me in such an environment that I enjoy most. The Directors of the National Institute of Oceanography (NIO) - the institution where I work - have always been positive and encouraging any act that triggered the process of thinking. Acknowledgments for this thinking environment would remain incomplete without naming Dr. C S Murty, now Deputy Director in this institute. He helped, encouraged, stimulated and kept my inquisitiveness alive all through the years of my career since completion of formal education and joining NIO. I therefore did not suffer from the syndrome of diffusion of thought by undertaking this study for Ph.D degree after a gap of fourteen years of formal education. I also would like to thank the authorities at Karnatak University, Dharwad for permitting me to register for this study without which this work would not have seen the light.

It was Prof. M A Gopinath of Documentation Research & Training Centre (DRTC) - the institution I studied last - introduced me to Prof. B S Maheswarappa - my guide. A day-long discussion with Prof. Maheswarappa on coining the problem and defining the scope of the study, tuned the wavelength of our minds. My vocabulary fails to express my gratitude to Prof. Maheswarappa. His keen interest in this study helped me maintain the speed and momentum required in the process. His suggestions on various parameters of bibliometrics necessary for this study made this work most comprehensive. His interest in using computer for analysis gave birth to a software for fast and accurate computations. The application software developed during this study would now enable others to analyse their data on similar lines. Prof. Maheswarappa's long experience in bibliometrics was also useful in standardizing data-sets for various parameters. His critical reading through pages made this work most accurate. A huge collection of reprints on all facets of bibliometrics in his personal library was extremely used by me.

Prof. B V Rajshekhar - present chairman of the department, acted as my co-guide at a later stage. While I had some setbacks in the submission of my thesis, Prof. Rajshekhar shouldered the responsibility in the right spirit. His reading of the thesis has helped me in eliminating some minute typographical errors and reorganisation of sentences at some places to make them more expressive. During the period of difficulties, he ensured all possible support.

I would also like to record my appreciation towards Professors C R Karisiddappa, S R Ijari (now retired), S L Sangam, and Drs. B D Kumbar and P V Konnur for their best wishes during the course of study.

It is equally important to acknowledge my colleague, Dr. G Narayana Swamy, Scientist at NIO. The very first draft of this work has been read, corrected, criticized, and appreciated in that order by him. Since he being one of the senior members of the NIO family, he could also endorse the results reported therein. This was an added advantage of his reading the draft, not realized initially.

Since this study required expertise from a variety of fields, many others came for rescue. Among them the few I must mention are: Prof. G V Kulkarni, Dhempe College, Panaji, and Prof. S S Nayak at Gulbarga University for guidance in statistics. Prof. V V Kamat from Goa University for suggesting me how to write the logic of the programmes for this study. Shri D N Gupta and other colleagues at Indoc helped me in searching on the database for the literature on the topic. This facilitated in confirming that the literature I referred was almost exhaustive. My colleagues Drs. S R Shetye, A Gouveia, S Raghukumar, Lata Raghukumar, A Mascarenhas, S G Dalal, A L Paroorkar, S G P Matondkar, A B Valsangkar, Govind Ranade, V N Kodagall, A V Mudholkar, R Nigam, V K Banakar, S/Shri V M Date, P V S S R Sarma. Devanand Kavlekar, Santosh Jakhi in the institute and...
my own colleagues in the library at NIO - Mrs. S H Oka, S/Shri G H Sainekar, A K Gawas, Edward Pereira, Dinu Gauns and Shri Pershuram Bannigadad at Gulbarga University also need special thanks for suggestions and guidance from time to time on various occasions. I would also like to thank my Gurubandhu Shri P G Tadsad and Gurubhagini Ms. A. Joshi for their help who are also studying with Prof. B S Maheswarappa for their Ph.D. There are several well wishers who have been always giving me the much needed moral support.

My sincere thanks are also to Dr. S Z Qasim, now Vice-chairman of the Society for Indian Ocean Studies and Prof. A M Pathan, Vice-Chancellor of the Karnatak University, Profs. V C Chavadi and M S Mannikeri in the Dept. of Geology, Karnatak University for timely help.

I have to record my gratitude to two families. One, of course, is mine and the other of my guide, Prof. Maheswarappa. Whenever I was with my guide, I stayed with them. This facilitated long discussions well into the late hours, and thus speeding up the work. They also cared for my special food habits which was very important. During the course of this study, my family members declared total 'holiday' for me from all domestic responsibilities so that I could concentrate on my job. I remain grateful to them.

I expect that one would find this study interesting and useful as so many brains and hands have been put to work. One may also find some lapses and errors. They are, of course, mine alone.

Dona Paula, Goa
