CONTENTS

CHAPTER – I

GENERAL INTRODUCTION 1-51

1) Proteases

2) Classification of proteases
   - Serine proteases
   - Cysteine proteases
   - Aspartyl proteases
   - Metallo proteases

3) Sources of proteases
   - Animal proteases
   - Microbial proteases
   - Plant proteases

4) Application of proteases

5) Physiological function of proteases

6) Role of proteases in hemostasis
   - Hemostasis
     - Vasoconstriction
CONTENTS

- Platelet aggregation
- Formation of fibrin
  - Proteases in coagulation
  - Contact activation pathway (Intrinsic pathway)
  - Tissue factor pathway (Extrinsic pathway)
  - Common pathway
- Fibrinolysis

7) Role of proteases and other cell components in wound healing process
   - Wound
   - Wound healing
   - Role of proteases in wound healing
   - Phases of wound healing
     - Hemostasis
     - Inflammation
     - Cellular migration and proliferation
       - Angiogenesis
       - Epithelialization
       - Protein synthesis and wound contraction
     - Remodeling

8) Drugs used to treat hemostasis disorders and wound healing and their side effects
   - Drugs used to treat hemostasis and their side effects
   - Drugs/ointments used to treat wounds and their side effects

9) Plants and their components used to treat hemostasis disorders and wound healing
CONTENTS

- Herbs to treat hemostasis disorders
- Herbs to treat wounds

10) Medicinal values of Cucurbitaceae family plants

11) Cucumber (Cucumis sativus)
   - Medicinal values of cucumber
     - Traditional uses
     - Pharmalological properties
   - Chemical constituents of cucumber
     - Seeds
     - Leaves
     - Fruit

12) Aim and scope  52-53

CHAPTER – II  54-77

BIOCHEMICAL CHARACTERIZATIONS OF CUCUMBER (Cucumis sativus) SAP EXTRACT PROTEOLYTIC ACTIVITY

1) Introduction  54-56

2) Materials and methods  57-62
   - Preparation of cucumber sap
   - Protein estimation
CONTENTS

- Sodium dodecyl sulfate-polyacrylamide gel electrophoresis (SDS-PAGE)
- Proteolytic activity
- SDS-PAGE and activity staining/zymogram
- Optimum pH determination
- Optimum temperature determination
- Inhibition studies
- Effect of metal ions
- Effect of solvents
- Effect of detergents
- Statistical analysis

3) Results 63-65
4) Discussion 66-68
5) Figures 69-77

CHAPTER – III 78-110

ROLE OF CUCUMBER (CUCUMIS SATIVUS) SAP EXTRACT PROTEOLYTIC ACTIVITY ON CLOT FORMATION, CLOT DISSOLUTION AND PLATELET FUNCTIONS.

1) Introduction 78-79
2) Materials and methods 80-86
   - Plasma re-calcification time
• Fibrinogenolytic activity
• Activated partial thromboplastin time (APTT)
• Prothrombin time (PT)
• Thrombin-like activity
• Factor VIIa-like activity
• Plasma clot hydrolyzing activity (Fibrinolytic activity)
  ▪ Colorimetric method
  ▪ Plate method
  ▪ Banding pattern of fibrinopeptides in SDS-PAGE
• Plasminogen activation assay
• Preparation of platelet-rich plasma and platelet-poor plasma
• Platelet aggregation
• Protein estimation
• Statistical Analysis

3) Results 87-89
4) Discussion 90-94
5) Figures 95-108
6) Tables 109-110
CUCUMBER SAP EXTRACT PROTEASES: ROLE IN WOUND HEALING

Introduction 111-112

Materials and methods 113-121

- Toxicity studies
  - Hemorrhagic activity
  - Edema Inducing Activity
  - Myotoxicity and Myonecrosis
- Wound healing activity
- Estimation of Granulation Tissue Free Radical and Antioxidant
  - Determination of Superoxide dismutase (SOD) activity
  - Determination of Catalase (CAT) activity
  - Determination of reduced glutathione (GSH) activity
  - Determination of nitric oxide (NO) scavenging activity
  - Determination of Lipid peroxidation (LPO) activity
  - Determination of Myeloperoxidase (MPO) activity
- Estimation of connective tissue components in granulation tissue
  - Estimation of Hydroxyproline (HPR)
  - Estimation of Hexosamine (HXA)
  - Estimation of Hexuronic acid (HUA)
- Histopathology Granulation Tissue
CONTENTS

- Protein estimation
- Statistical Analysis

Results 122-123
Discussion 124-126
Figures 127-132
SUMMARY AND CONCLUSIONS 133-136
REFERENCES 137-163
LIST OF PUBLICATIONS 164

LIST OF FIGURES

CHAPTER – I

1.1 Classification of Protease 3
1.2 Catalysis of different type of proteases 6
1.3 Blood coagulation cascade 15
1.4 Graphical representation of fibrinogen molecule 18
1.5 Conversion of fibrinogen to fibrin 18
1.6 Fibrin degradation by plasmin by fibrinolysis process 19
1.7 Basic responses that can occur after an injury 22
1.8 Phases of wound healing 31

CHAPTER – II

2.1 SDS-PAGE pattern and substrate gel assay of CSE 69
2.2 Dose dependent and time kinetics of proteolytic activity of CSE 70
CONTENTS

2.3  Proteolytic activity of CSE v/s pH 71
2.4  Proteolytic activity of CSE v/s temperature 72
2.5  Effect of known protease inhibitors on proteolytic activity of CSE 73
2.6  Effect of metal ions on proteolytic activity of CSE 74
2.7  Effect of solvents on proteolytic activity of CSE 75
2.8  Effect of detergents on proteolytic activity of CSE 76
2.9  Storage stability of CSE 77

CHAPTER III

3.1  Effect of CSE on plasma recalcification time 95
3.2  Hydrolysis of fibrinogen by CSE 96
3.3  Effect of CSE on Prothrombin time 97
3.4  Effect of CSE on congenital factor VII deficient human plasma 98
3.5  Effect of CSE on fibrin clot hydrolysis and inhibition by protease Inhibitors 99
3.6  Banding pattern of fibrinopeptides in SDS-PAGE 100
3.7  Effects of protease inhibitors on proteolytic activity of CSE 101
towards activation of plasminogen
3.8  Effect of CSE on platelet aggregation induced by epinephrine 102
3.9  Effect of CSE on platelet aggregation induced by collagen 103
3.10 Effect of CSE on platelet aggregation induced by ADP 104
3.11 Effect of protease inhibitor on inhibition of epinephrine induced 105
### CONTENTS

platelet aggregation by CSE

3.12 Effect of protease inhibitor on inhibition of collagen induced platelet aggregation by CSE 106

3.13 Effect of protease inhibitor on inhibition of ADP induced platelet aggregation by CSE 107

3.14 Effect of CSE and protease inhibitors on platelet aggregation of human platelet rich plasma 108

### CHAPTER – IV

4.1 Hemorrhagic activity of CSE 127

4.2 Effect of CSE on wound healing activity using mouse model 128

4.3 Estimation of antioxidant of granulation tissue 129

4.4 Estimation of free radical of granulation tissue 130

4.5 Estimation of biochemical parameters of granulation tissue 131

4.6 Histopathology of skin granulation tissue of mice from day 3 to 21 stained with Hematoxylin-Eosin 132
LIST OF TABLES

CHAPTER – I

1.1 Distribution of proteases in different source .......................... 7
1.2 Percentage wise distribution of different protease ................. 7
1.3 Application of proteases in different industries ..................... 8
1.4 Primary factors involving in blood coagulation cascade .......... 14
1.5 Regulation of wound repair ............................................. 32
1.6 Medication for hemostasis disorders and their side effects ...... 34
1.7 Medication for wound healing and their side effects .......... 36
1.8 List of plants having cardio tonic properties ....................... 38
1.9 Herbs used to treat wound .............................................. 41
1.10 Medicinal values of Cucurbitaceae family plants ............... 43
1.11 Pharmacological properties of Cucumis sativus ................. 49

CHAPTER – III

3.1 Effect of protease inhibitors on recalcification time, prothrombin time and factor VII deficient plasma clotting property of CSE 109
3.2 Plasminogen activation assay of CSE .............................. 110
