# List of Figures

1.1 Configuration of proposed control ................................. 3  
1.2 Asymptotically stable VSS consisting of two unstable structures ... 4  
1.3 Sliding mode concept ................................................. 5  
1.4 General uncertain plant ............................................. 7  
1.5 General plant with EID ........................................... 7  
2.1 Disturbances considered ........................................... 26  
2.2 Control performance with sat function .......................... 27  
2.3 Comparison of control ............................................... 28  
2.4 Control performance with first order UDE ..................... 29  
2.5 Effect of $\tau$ (first order filter) on chatter mitigation .......... 30  
2.6 Control performance with second order UDE .................. 31  
2.7 Effect of $\tau$ and filter order on chatter mitigation ............ 32  
2.8 Tracking performance with $\tau=10$ ms .......................... 36  
2.9 Tracking performance with $\tau=1$ ms ............................ 37  
3.1 Estimation of states and uncertainty with first order UDE ...... 52  
3.2 Model following with uncertainty estimation .................... 53
### List of Figures

3.3 Robustness for increased uncertainty in $g(x,t)$ .......................... 54
3.4 Robustness for fast disturbance ............................................. 55
3.5 Comparison between first order and second order UDE ............... 56
3.6 Inverted Pendulum without disturbance .................................... 59
3.7 Inverted Pendulum with disturbance ....................................... 60
3.8 Increased robustness with $2^{nd}$ order filter ............................ 61

4.1 Configuration of system with SMC and EID .............................. 67
4.2 Free body diagram of ABS setup ........................................... 77
4.3 Slip regulation for nominal plant with uncertainty ...................... 82
4.4 Control performance for nominal plant with uncertainty ............... 83
4.5 Control performance with uncertainty in mass .......................... 84
4.6 Control performance with variation in $\mu(\lambda)$ ........................ 85
4.7 Control performance for different friction models ........................ 86

5.1 Configuration of system with SMC and EID plus DO ................... 91
5.2 Single track bicycle model .................................................... 100
5.3 Control performance with uncertainty in road adhesion coefficient .. 105
5.4 Tracking and estimation accuracy ........................................... 106
5.5 Control performance with uncertainty in mass and inertia .............. 107
5.6 Control performance with varying longitudinal velocity ............... 108
5.7 Comparative performance with first order and second order filter ... 109

6.1 ECP220 Actual Plant ......................................................... 125
6.2 Model following for nominal plant ......................................... 128
