"Education means to enables the child to find out ultimate truth, Making truth its own and giving expression to it."

- R.N. Tagore

The aim of education also changes accordingly to the needs of a person. The main aim of education is the all round development of the child and character development. The child of today is the citizen of tomorrow whether able or disabled.

The handicap in a child puts a handle in the pathway of the child. The child has to face various adjustments and learning problem, as results of there an inferiority complex develop in them. The mental level of these children are like those of the normal ones but due to the handicap they are not able to use them various parts like blind- eyes, deaf & dumb- ears & crippled- limbs of the body.

Unfortunately a larger number of handicapped children are found in India. The education provided are them should be according to the need so that they are able to adjust themselves socially, emotionally and educationally.

Hence, I aimed at studying "Impact of the Study Habit and Adjustment on Educational Achievement of Physically Handicapped Students".

The results of my study revealed that there is an impact of the study habit and adjustment on educational achievement of physically handicapped students.

I hope that the present work will prove helpful to the improvement of the students who are the future of our nation

Suggestions for the improvements of the work will be gratefully acknowledged.
