LIST OF TABLES

Table 1.1: Details of sample preparation and their designations
Table 2.2: Results of DSC scans of DGEBA in the presence of various types of diorganotindichlorides ($R_1R_2SnCl_2$) at varying heating rate
Table 2.3: Results of thermal stability of isothermal cured epoxy resins (DGEBA: $R_1R_2SnCl_2$) at 10°C heating rate in nitrogen atmosphere
Table 3.1: Detail of sample preparation and their designations
Table 3.2 Results of DSC scans of samples at different heating rates
Table 3.3 Results of Thermal stability of isothermal cured epoxy resins at 10°C min⁻¹ heating rate
Table 4.1: Details of sample preparation and their designation
Table 4.2: Results of C, H, N and Amine Equivalent Weight of Imide-Amines
Table 4.3: Results of FTIR spectra, characteristic absorption bands (cm⁻¹) and their assignment
Table 4.4: Results of $^1$H-NMR spectra along with their assignment
Table 4.5: Results of $^{13}$C-NMR spectra along with their assignment
Table 4.6: Results of DSC scans of DGBT in presence of stoichiometric amount of amines (heating rate = 10°C/min)
Table 4.7: Results of DSC scans of DGBT in presence of stoichiometric amount of imide–amines (heating rate 10°C/min)
Table 4.8: Results of DSC scans of DGBT in presence of imide-amines at varying heating rates of 5, 15 and 20°C/min
Table 4.9: Results of TG/DTG traces of DGBT cured isothermally with stoichiometric amount of amines in nitrogen atmosphere (heating rate = 20°C/min)
Table 4.10: Results of TG/DTG traces of DGBT cured isothermally with stoichiometric amount of imide-amines in nitrogen atmosphere (heating rate = 20°C/min)
