### LIST OF TABLES

2.1. Tuberculosis: Infection vs Disease  
2.2. Mechanism of drug action and resistance in mycobacteria  
2.3. Second line anti-TB drugs  
2.4. Substances for which piperine has been directly shown to increase bioavailability  
3.1. List of equipments used in the study  
3.2. List of reagents and chemicals used in the study  
3.3. Primer sequence used during study  
3.4. Protective efficacy of piperine during prophylactic study  
3.5. List of primer for expression study using RT-PCR  
4.1. List of sputum samples collected from C.D. hospital, Jammu  
4.2. Zone diameter of rifampicin alone and in combination with piperine against *M. tuberculosis* H37Rv  
4.3. *In-vitro* combination studies against *M. tuberculosis*  
4.4. Frequency of mutation in *M. tuberculosis* H37Rv  
4.5. PAE's (h*) of rifampicin alone and in combination with piperine against *M. tuberculosis* H37Rv following 2-h exposure  
4.6. Drug Susceptibilities of *M. tuberculosis* H37Rv and *M. tuberculosis* rif'  
4.7. Identification of clinical isolates  
4.8. Characterization of mutation in *rpoB* gene in clinical isolates/ lab generated mutants of *M. tuberculosis*  
4.9. Evaluation of rifampicin alone and in combination with piperine in murine model of *M. tuberculosis* H37Rv infection
