LIST OF FIGURES

2.1. Computerized tomography showing lesions in the vertebral bodies of T10/T11
2.2. Mycobacteria growing on Löwenstein-Jensen slants
2.3. Colonies of Mycobacterium tuberculosis on Lowenstein-Jensen medium
2.4. Electron microscopy of M. tuberculosis growing in culture
2.5. Schematic representation of M. tuberculosis cell envelope
2.6. Transmission of M. tuberculosis
2.7. M. tuberculosis and the host defense system
2.8. Host response and granuloma formation
2.9. Architecture of the tubercle in lung
2.10. Cell traffic in the immune response in TB
2.11. Inflammatory responses of phagocytic cells upon activation with M. tuberculosis
2.12. A mantoux tuberculin skin test
2.13. Extensive cavitary lung disease due to Mycobacterium tuberculosis visualized by plain chest radiography
2.14. Acid fast staining of M. tuberculosis
2.15. Smear-positive case detection rate under DOTS, by WHO region
2.16. Global TB incidences
2.17. Distribution of proportion of MDR-TB case among new TB
2.18. Mechanisms and pathways limiting drug efficacy in M. tuberculosis
   Acid fast staining of M. tuberculosis
2.19. The Mitchison hypothesis
2.20. Structure of Piperine
4.1. Agar diffusion assay
4.2. Time kill studies
4.3. Mutation prevention concentration
4.4. Agarose gel electrophoresis of DNA isolated from M. tuberculosis H37Rv
4.5. Agarose gel electrophoresis of PCR products amplified with IS6110 gene specific primers of M. tuberculosis
4.6. Agarose gel electrophoresis of PCR products amplified with 16S gene specific primers
4.7. rpoB gene amplification in clinical isolates/lab generated mutants
4.8. RNA isolation from M. tuberculosis
4.9. Expression of Rv1258c in *M. tuberculosis* H37Rv and *M. tuberculosis* rif\(^t\) induced by rifampicin

4.10. Docking of piperine to the active site of Rv1258c

4.11. Effect of piperine (PIP) on proliferation of T and B Lymphocytes - *in vitro*

4.12. Influence of piperine (PIP) on expression of cytokines in mouse splenocytes *in vitro* (A): IFN-\(\gamma\), (B) IL-2, (C) IL-4

4.13. *In-vitro* effect of piperine on NO production in peritoneal macrophages

4.14. CFU determination of mice lung during prophylactic study

4.15. Histopathology of Mouse lung

4.16. Influence of piperine (PIP) on expression of cytokines in mouse- *in vivo* by flow cytometry (A) IFN-\(\gamma\), (B) IL-2, (C) IL-4

4.17. Influence of piperine (PIP) on CD4\(^+\)/CD8\(^+\) expression in mouse-*in vivo* by flow cytometry

4.18. RNA isolation from infected mouse lung

4.19. Relative mRNA expression levels of IFN-\(\gamma\) (A), IL-2 (B), IL-4 (C) in mice lung (n=8) treated with piperine (PIP) at 1 mg/kg and 10 mg/kg.
