CHAPTER 1

INTRODUCTION

§§ Preliminary Discussions on Entire and Meromorphic Functions 1 4
§§ Existing Literature in Chapter Three 4 5
§§ Existing Literature in Chapter Four 5 5
§§ Existing Literature in Chapter Five 6 7
§§ Existing Literature in Chapter Six 7 8

CHAPTER 2

PRELIMINARY REMARKS, RESULTS, DEFINITIONS AND EXAMPLES 11 34

2.1 Standard Notations and Symbols 11 12
2.2 Preliminary Remarks on the Nevanlinna’s Theory 12 20
   2.2.1 Poisson-Jensen Formula 13 14
   2.2.2 Nevanlinna’s First Fundamental Theorem and its significance 14 15
   2.2.3 Picard’s Theorem 16 16
   2.2.4 Definition of S(r,f) and its estimation 16 17
   2.2.5 Nevanlinna’s Second Fundamental Theorem 17 18
   2.2.6 Discussions on Deficiencies and Nevanlinna’s Theorem on Deficient Values 18 19
   2.2.7 Relationship between Picard’s Theorem and Nevanlinna’s Theorem on Deficient Values 19 20
   2.2.8 Applications of Nevanlinna’s Theory 20 20
   2.2.9 Some Preliminary Discussions on Bicomplex Analysis 21 21
2.3 Preliminary Definitions`
2.3.1 Order (lower Order), type (lower type), weak type, generalized order (generalized lower order), generalised type and generalised weak type of entire and meromorphic functions 22 26

2.3.2 Relative order (relative lower order), relative type (relative lower type) and relative weak type of entire and meromorphic function with respect to another 26 27

2.3.3 Zero Order (Zero lower order) of entire functions 27 27

2.3.4 Asymptotic Equivalence of two entire functions 28 28

2.3.5 Small function with respect to a meromorphic function 28 28

2.3.6 Deficiency related to simple a-points of meromorphic Function 28 28

2.3.7 Definitions related to bicomplex numbers 28 29

2.3.8 Definition corresponding to Laplace transform of functions of bicomplex variables 29 29

2.3.9 Definition in connection to Fourier transform of functions of real and complex variables 30 30

2.3.10 Examples 30 34

CHAPTER 3
GROWTH ANALYSIS OF COMPOSITE ENTIRE FUNCTIONS IN THE LIGHT OF SLOWLY CHANGING FUNCTIONS 36 88

3.1 Introductory remarks 36 37

3.2 Lemmas 37 38

3.2.1 Theorems 38 88

CHAPTER 4
SOME GROWTH PROPERTIES OF DIFFERENTIAL POLYNOMIALS FOCUSING RELATIVE GROWTH INDICATORS 90 127

4.1 Introductory remarks 90 91

4.2 Lemmas 91 96

4.2.1 Theorems 96 127
