Acknowledgements

Allah, the almighty, the lord of all worlds, the most merciful, the most gracious, be witness, I acknowledge your every minute and greatest blessing on me, apparent and hidden favours, from the time before, to the time after this life, in all the quarters, including my research and writing of this Ph.D thesis, just for my belief in you.

I would like to express my sincere gratitude to my advisor Dr. S. M. K. Quadri for his continuous support during my Ph.D study and research. I acknowledge his patience, motivation, enthusiasm, and immense knowledge. His guidance helped me throughout my Ph.D study and writing of this thesis. I could not have imagined having a better advisor and mentor for my Ph.D study. Thank you sir.

Besides my advisor, I owe a great debt of gratitude to the teaching faculty of Department of Computer Sciences, UoK for teaching me in my Masters degree.

I am also indebted to Dr. Rana Hashmy for having discussions regarding my research, sharing general ideas, and boosting my morale. Thank you ma’am.

I also appreciate the support of non-teaching faculty of Department of Computer Sciences, UoK in aspects that facilitated smooth working of my study.

As a Ph.D student in UoK, I spent most of my time in research lab. I thank my fellow lab-mates for discussions, for working together late hours before deadlines, for staying with me for 2 months in the department during winter of 2010 and for their suggestions and criticism. Furthermore, I thank them, and my friends and students, for listening to my arguments, reading my papers, pinpointing where I went wrong and their valuable suggestions.

Besides research activities, I also enjoyed my stay in UoK. I thank my fellow lab-mates, colleagues and friends for sharing tea in canteen, for playing counter-strike in lab during leisure hours, for cooking food during our 2 month long stay in the department during the winter of 2010, and everything else.
This thesis would not have been possible without the efforts of people who don’t know me. They include researchers of file system community, in particular Dr. Mendel Rosenblum, Dr. D.S.H. Rosenthal, Dr. Margo Seltzer, Dr. Erez Zadok and many more. I thank you for your contributions. Furthermore, I thank Dennis Ritchie for C language, Linus Torvalds for Linux kernel, Donald Knuth for \TeX and Leslie Lamport for \LaTeX, Pascal Brachet for TexMaker, authors of InkScape, Scilab Consortium for Scilab, developers and maintainers of Fedora OS, and designers, developers and maintainers of hundreds of file systems.

Also, this work would not have been possible without my experiments. I acknowledge my hp8100 Elite desktop for running my experiments and my hp nx7300 laptop for drafting my papers and this thesis. I also acknowledge the suffering of ENTER Key. You did well.

Last but not least, no words are ever sufficient to express my everlasting love, gratitude, appreciation and thanks to my beloved father and mother for being the light of my life. I am forever indebted to them and my brother, who understanding the importance of this work, suffered my hectic working hours.

Wasim Ahmad Bhat
