I am beholden to Professor S.A. Abbasi for many things; his initiation of me into the exciting field of risk assessment is just one of the priceless gifts I have been fortunate to get from him.

Professor Abbasi helped me to realise, more by his actions than his words, how a true scientific pursuit must lead to a rational, liberal, and caring existence. He enabled me to understand how so many of us tend to separate science from rest of our existence and how such compartmentalisation leads to most of the bitterness and intrigues that pervade the academic world - as indeed most of the human existence. Above everything else, Professor Abbasi taught me - again by his acts rather than words - that one can (and should) be proud of one's religion and culture, yet be genuinely affectionate and helpful to others. He showed me the path towards the most sought after yet most elusive goals - brotherhood and peace.

I shall fondly remember the good times I have had with my colleagues Dr. E. V. Ramasamy, Er. K. Senthilvelan, Dr. S. Vinithan, Er. A. Shabbudin and Dr. K. Krishnakumari. Equally pleasant are the memories of working together with software professionals Ms J. Deeparani, Ms S. M. Jaisakthi, and Mr Chandresh Desai, and the secretarial staff of CPET, notably Mrs. K. Thilagam, Mr. D. Prabanandan, and Ms. N. Parimalame.

Outside CPET my support-base came from Bhai Jan, Ammi, and my brothers Khurram bhai, Fardeen and Sharique. They were ever so patient, ever so kind.
