ACKNOWLEDGEMENTS

Whatever we receive in the way of providence has God’s blessings in it and will do us good.

This work is dedicated to my late mother Smt. Sumitra M. More who had disciplined my childhood with the idea of certainty to turn up as a good human being and an ideal citizen. This idea got a new shape with none other than my research guide Dr. Kalpana Pai, who has been the ideal mentor. Her sage advice, insightful criticisms, and patient encouragement aided the writing of this thesis in innumerable ways. She taught me that even the largest task can be accomplished if it is done one step at a time. She generously shared her meticulous research thinking and insights that supported and expanded my work. Her conclusions gave me the courage to challenge the common beliefs about the Nature and Ayurveda. I am really indebted to her for her enriching guidance throughout the study period. This instilled in me a motive towards becoming a researcher with a human face.

Though only my name appears on the cover of this dissertation, a great many people have contributed to its fulfillment. I owe my gratitude to all those people who have made this dissertation possible and because of whom my Ph.D. experience has been one that I will cherish forever.

Foremost, I wish to express my warm and sincere thanks to Prof. Saroj Ghaskadbi, Head of the Zoology Department and also as a teacher, for giving me the opportunity to work in the department and allowing me to use all the facilities available in the department.

Being part of the Zoology department was a very special and invaluable experience for me. I warmly thank all the faculty members, Prof. Deepti Deobagkar, Dr. Kedar Ahire, Dr. Richa Ashma for their helpful advice and encouragement. I also wish to thank all the non teaching staff, library, stores, office and accounts staff members of the department for their help.

I am very grateful to Dr. M. S. Patole, National Centre of Cell Science, Pune, for his valuable advice and timely help. His encouragement and help made me feel confident to fulfill my desire and to overcome every difficulty I encountered. I thank him for sharing his incomparably profound knowledge with me. After every meeting with him I felt a little ‘wiser’. It is not sufficient to express my gratitude with only a few words.
I am thankful to the University Grants Commission-Centre for advanced studies, for awarding me Junior Research Fellowship and subsequently Senior Research Fellowship for completion of my Ph.D. Thesis.

I would like to thank Dr. Absar Ahmad for showing confidence in me to be a deserving candidate for the award of best poster presentation in the International Conference of Biology Beyond Borders 2010. This in fact stimulated my spirit towards Science. Thanks are due to Dr. T. B. Poduval, Bhabha Atomic Research Centre, Mumbai, for providing various chemicals without which the present work would not have been completed.

Very special thanks to my lab mates Nutan Jadhav, Mahesh Kharat, Avinash Vanjare, Yugandhar Shinde, Sameer Padhye, Raheleh Mehrabi, Shweta Yadav and Kalyani whose help, patience, friendliness, suggestions and encouragement helped me in all the time of research and during writing of this dissertation. I would like to acknowledge Tekchand for his guidance and help in taking microscopic photographs. I give my sincere thanks to all M.Sc. project lab mates & friends Geeta, Chaitali, Shivani for their kind help and encouragement. I am also very thankful to my colleagues Anupama, Poornima, Mehrunissa, Prajakta, Sangeeta, Nayana, Komal, Priyanjali, Yogita, Rahul & Jayant for their valuable advice and friendly help. Their kind support and fruitful discussions about my work have been of great value in this study. Thanks for creating such a nice work atmosphere.

Of course, such a study is impossible without the cooperation of my family members. I would like to thank especially my father Mr. Machhindra More whose love is boundless and I would like to acknowledge the tremendous sacrifices made by him to ensure that I had an excellent education. I wish to thank my brother Jayant More for listening to my complaints and frustrations and for believing in me. I express my heartfelt gratitude to my sister Monali More for helping me to get through the difficult times, and for all the emotional support and entertainment. I am thankful for the care they provided. For this and much more, I am forever indebted.

I would also like to gratefully acknowledge the support of some very special individuals. They helped me immensely by giving me encouragement and friendship. This work could not have been accomplished without the encouragement of my husband Mr. Yogesh Kamble who always wished me to reach higher. He mirrored back my ideas so I heard them aloud, an important process for this writer to shape the
thesis. I could always rely on his support. I extend my sincere thanks from the bottom of my heart towards my in-laws for their unfathomable love and for being always by my side in all the decisions taken and for what I am today.

The chain of my gratitude would be definitely incomplete if I would forget to thank the first cause of this chain Dr. R. D. Choudhary, using Aristotle's words, ‘The Prime Mover’.

Lastly, I would like to thank everybody that has been a part of my life but I failed to mention, thank you very much. There won’t be enough space if I will mention you all.

-Priti Machhindra More
