PREFACE

When I was looking for an ideal project for my M.C.A - VIth semester my search ended at Gujarat Ambuja Cements Ltd., Kodinar of Amreli district. Having its door opened before a few years ago since 1985.

There is a clear need for bringing, under the scope of rapid computerisation, the activities of the system that can flow from the system like, Reservation of room, Room Occupancy, Lodging facility, Store section, etc...

For many organisation Hotel Management System are now at the heart of daily activities in Guest house of the organisation. The development of Management System involves the system analysis and those who will use the applications that emerge-end-users. Also analysis and design of management system involves many parts of the organisation. This project report which is submitted as a part of the Third year course leading to the Degree of Master of Computer Application, conducted by Department of Computer Science & Application, Bhavnagar University, Bhavnagar.

This project has been developed as a part of computerization of whole activity in all Guest houses of Gujarat Ambuja Cements Limited. This project involves analysis and design of the Hotel Management System (HOTMANS) has been developed for providing more convenient work and to become simplified entire system.

The net result of this collective effort was not only a viable application for GACL, but a complete transcript of the systems or project development process, which I hope has been conveyed in this project report.
