LIST OF FIGURES

1. **Figure 2.1**: IR absorption spectra of compound MTD1
2. **Figure 2.2**: LC-MS pattern of compound MTD1
3. **Figure 2.3**: EI-MS pattern of compound MTD1
4. **Figure 2.4**: $^1$H NMR of compound MTD1
5. **Figure 2.5**: $^{13}$C NMR of compound MTD1
6. **Figure 2.6**: IR absorption spectra of compound MTD2
7. **Figure 2.7**: LC-MS pattern of compound MTD2
8. **Figure 2.8**: EI-MS pattern of compound MTD2
9. **Figure 2.9**: $^1$H NMR of compound MTD2
10. **Figure 1.10**: $^{13}$C NMR of compound MTD2
11. **Figure 2.11**: IR absorption spectra of compound MTD3
12. **Figure 2.12**: LC-MS pattern of compound MTD3
13. **Figure 2.13**: EI-MS pattern of compound MTD3
14. **Figure 2.14**: $^1$H NMR of compound MTD3
15. **Figure 2.15**: $^{13}$C NMR of compound MTD3
16. **Figure-2.16**: IR absorption spectra of compound MTD4
17. **Figure 2.17**: LC-MS pattern of compound MTD4
18. **Figure 2.18**: EI-MS pattern of compound MTD4
19. **Figure 2.19**: $^1$H NMR of compound MTD4
20. **Figure 2.20**: $^{13}$C NMR of compound MTD4
21. **Figure 2.21**: IR absorption spectra of compound MTD5
22. **Figure 2.22**: LC-MS pattern of compound MTD5
23. **Figure 2.23**: $^1$H NMR of compound MTD5
24. Figure 2.24: $^{13}$C NMR of compound MTD5

25. Figure 4.1: Targets of free radicals

26. Figure 4.2: Natural antioxidants separated in classes. Green words represent exogenous antioxidants, while yellow ones represent endogenous antioxidants

27. Figure 4.3: The DPPH scavenging activity of different extracts of the plant, M. terminale Dalz, in comparison with the standard.

28. Figure 4.4: The DPPH scavenging activity of purified compounds of the plant, M. terminale Dalz, in comparison with the standard.

29. Figure 4.5: The metal chelating capacity of different extracts of the plant, M. terminale Dalz, in comparison with the standard.

30. Figure 4.6: The metal chelating capacity of purified compounds of the extracts of plant, M. terminale Dalz, in comparison with the standard.

31. Figure 4.7: The reducing power assay of different extracts of the plant, M. terminale Dalz, in comparison with the standard.

32. Figure 4.8: The percentage hydroxyl radical scavenging activity of different extracts of the plant, M. terminale Dalz, in comparison with the standard.

33. Figure 4.9: In vitro protective effects of M. terminale Dalz extracts against $H_2O_2$ induced hemolysis of human erythrocytes.

34. Figure 4.10: In vitro protective effects of M. terminale Dalz extracts against $H_2O_2$ induced lipid peroxidation on erythrocytes ghost membrane.
35. **Figure 6A.1**: From initiation of acute inflammation to resolution: Inflammatory response to microbial infection and tissue injury, and the role of selected cell types and specialized pro-resolving lipid mediators.

36. **Figure 6A.2**: Effect of different extracts of *M. terminale Dalz* plant at 300 mg/kg of indomethacin on carrageenan induced paw edema in rats.

37. **Figure 6C.1**: Anti-plasmodial activity of different extracts of *M. terminale Dalz*.

38. **Figure 7.1**: Analgesic effect of petroleum ether, chloroform and methanol extract of *Memecylon terminale Dalz* on heat stimulation response in the hot plate test.

39. **Figure 7.2**: The photomicrographs of control and CCl₄ treated liver sections stained with haematoxylin and eosin.
