LIST OF TABLES

Chapter 1

Table 1 Waste generation, per capita, in India .................................. 5

Table 2 Typical composition of municipal solid waste in India ............. 5

Chapter 3

Table 1 Summary of characteristics used by Bouche (1977) to distinguish ecological type of earthworms ........................... 25

Chapter 4

Table 1 Generation of vermicasts (% of feed mass) per 15 days by the four earthworm species, with chopped fresh water hyacinth:cowdung as feed ........................................... 46

Table 2 Worm biomass, g, in reactors, as a function of time ............... 46

Table 3 Number of new offspring recorded each fortnight in various reactors ................................................................. 47

Chapter 5

Table 1 Reproducibility of the reactor performance: illustrative example of vermicast output (g) per fortnight in duplicate reactors fed with 75 g of precomposted water hyacinth per fortnight ........................................... 52

Chapter 6

Table 1 Recovery of vermicast as a function of time in low-rate reactors (I,II) with the feed WH:CD in 4:1 ratio ....................... 56

Table 2 Recovery of vermicast as a function of time in low-rate reactors (I,II) with the feed WH:CD in 5:1 ratio ....................... 57
Table 3 Recovery of vermicast as a function of time in low-rate reactors (I,II) with the feed WH:CD in 6:1 ratio ..........................57

Table 4 Recovery of vermicast as a function of time in high-rate reactors (I,II) with the feed WH:CD in 6:1 ratio ..........................59

Chapter 7

Table 1 Average vermicast from duplicate reactors operated at a feed loading rate of 1 kg per 10 days; the recovery has been expressed as % of feed mass .................................61

Table 2 Average net increase in worm zoomass in different reactors, g........................................................................62

Table 3 Reproduction (average of cumulative number of offspring) produced in different reactors ...............................63

Chapter 8

Table 1 Recovery of vermicasts (% each fortnight) .....................71

Table 2 Increase in worm biomass (grams) per fortnight over six months .................................................................73

Table 3 Number of offspring generated each fortnight over 6 months ........................................................................74

Chapter 9

Table 1 Recovery of vermicasts (%) as a function of time ............78

Table 2 Number of earthworms found in the reactors each fortnight ........................................................................80
Chapter 10

Table 1 Recovery of vermicastings with paper:cowdung 4:1 as feed in low-rate digesters .........................................................83

Table 2 Recovery of vermicastings with paper:cowdung 5:1 as feed in low-rate digesters .........................................................83

Table 3 Recovery of vermicastings with paper:cowdung 6:1 as feed in low-rate digesters .........................................................84

Table 4 A typical set of results from a duplicate run with 4:1 paper:cowdung, as feed .................................................................85

Table 5 Recovery of vermicastings with paper:cowdung 4:1 as feed in high-rate digesters .........................................................85

Table 6 Recovery of vermicastings with paper:cowdung 5:1 as feed in high-rate digesters .........................................................86

Table 7 Recovery of vermicastings with paper:cowdung 6:1 as feed in high-rate digesters .........................................................86

Chapter 11

Table 1 Vermicast output in reactors with 250 worms (62.5 worms per litre) .................................................................91

Table 2 Vermicast output in reactors with 450 worms (112.5 worms per litre) .................................................................92

Table 3 Vermicast output in reactors with 650 worms (162.5 worms per litre) .................................................................93

Table 4 Increase in worm zoomass,g,during seven months ......................97

Table 5 Number of offspring generated in seven months .....................98
Chapter 12

Table 1 Vermicast output in low-rate vermireactors with conventional and modified vermibeds .............................................. 103

Table 2 Vermicast output in high-rate vermireactors with conventional and modified vermibeds .............................................. 105

Chapter 13

Table 1 Recovery of vermicasts (% of feed mass) every 15 days from the vermireactors run on 'parent' earthworms and their adult offspring ............................................. 111

Chapter 14

Table 1 Recovery of vermicast (g, kg⁻¹ feed) every 10 days from reactors operated at different earthworm densities ...................... 121

Table 2 Increase in worm zoomass each month in reactors operated with 62.5 worms l⁻¹ and 75 worms l⁻¹ ...................................... 124

Table 3 Number of offspring produced each month in reactors operated with 62.5 worms l⁻¹ and 75 worms l⁻¹ .............................. 125

Table 4 Decline in C/N ratio during the composting process .............. 127

Table 5 C/N ratio of the vermicompost harvested from each run ........ 127

Chapter 15

Table 1 Recovery of vermicast in reactors with 250 animals ............ 131

Table 2 Recovery of vermicast in reactors with 300 animals .................. 132
Chapter 16

Table 1 Effect of application of water hyacinth compost/vermicompost on the growth of Crossandra (Crossandra undulaefolia) ........141

Chapter 17

Table 1 Effect of application of neem vermicompost on the growth and yield of brinjal (Solanum melogena Linn) ..............147
