ACKNOWLEDGEMENTS

At the outset, I would like to express my heartfelt thanks to my supervisor, mentor and guide, Dr. B. S. Lakshmi, Assistant Professor, Centre for Biotechnology, Anna University Chennai. I would be amiss in my duty, if I failed to remember the constant support, help, interest and guidance meted out by her, without whom this dissertation would not have been a reality. Her patience with me has been phenomenal. Besides her words of wisdom, encouragement and understanding has made this a very enjoyable learning experience.

I would also like to thank Dr. Sankaran, Professor and Head, Centre for Biotechnology, Anna University Chennai. I would also like to thank Dr. R. B. Narayanan and all the other faculty of CBT. It is with a deep sense of gratitude that I acknowledge the immense help rendered by Dr. Sakthivel, Professor, Pondicherry University, and Dr. Devaraj, Professor, Madras University, for allowing me the use of their lab facilities.

I wish to thank all my friends and labmates, for all their support, help and understanding, especially that of Sujatha, Gayathri, Vinay, Sasishekar, Thyagarajan, Moushmi Priya and Raaman. I am deeply indebted to Ms. Goushina Begum, Mrs. Cecily and all the other non-teaching staff of CBT for all their help rendered throughout my dissertation.

Most of all, I would like to thank my parents, who have been pillars of strength and have been with me through all my difficult times and good. Without you Pappu and Amma, and all the security, support, understanding, mentoring, guidance and love that you offer, this thesis would quite literally have not been possible. I owe it all to you, on this earth. I thank God for all that is being done for me and for this life in which this thesis has been possible.

LAKSHMI JANAKARAJAN
