Personality Dimensions, Conflict Resolution Strategies and Marital Satisfaction

Chapter 2

Review of literature

This chapter deals with synthesis of literature on marital satisfaction, rationale of study, objectives, problem, and hypotheses and operational definitions of included variables.

Conflict Resolution Strategies and marital satisfaction

Marital conflict might be a significant issue of concern and study. Once conflict arises among couples, it threatens the stability of relationship. The manner in which the couple handles conflict is typically portrayed in terms of resolution "style" or...
Personality Dimensions, Conflict Resolution Strategies and Marital Satisfaction

Chapter 3

Method

Research design
A mixed-methods research design was employed. The present research work utilized a mixed-methods approach, comprising both qualitative and quantitative components. The qualitative component consisted of in-depth interviews and focus group discussions, while the quantitative component involved the administration of standardized questionnaires. The data collected from these methods were then analyzed to draw meaningful conclusions.

Participants
A total of 200 participants were recruited for the study. The participants were selected through a random sampling technique, ensuring representation from various demographic backgrounds.

Statistical Analysis and Interpretations

Methods of statistical analysis
All data were analyzed using statistical software. Descriptive statistics were used to summarize the data, while inferential statistics were employed to test hypotheses and draw conclusions. The choice of statistical methods was guided by the nature of the data and the research questions.

Summary of statistical analysis

1. **Descriptive Statistics**
   - Mean and standard deviation were calculated for continuous variables.
   - Frequency distributions were examined for categorical variables.

2. **Inferential Statistics**
   - **Correlation Analysis**
     - Pearson's r was used to assess the strength and direction of the relationship between variables.
   - **Regression Analysis**
     - Multiple regression analysis was conducted to predict a dependent variable from multiple independent variables.
   - **ANOVA**
     - One-way ANOVA was used to compare means across different groups.
   - **Chi-square Test**
     - Chi-square tests were performed to examine the association between categorical variables.

3. **Model Validation**
   - The models were validated using cross-validation techniques and goodness-of-fit indices.

4. **Qualitative Analysis**
   - Thematic analysis was used to interpret the qualitative data.
   - Content analysis was applied to code and categorize the textual data.

5. **Interpretation**
   - The findings were interpreted in the context of existing literature and theoretical frameworks.

6. **Discussion**
   - The findings were discussed in terms of their implications for theory and practice.

**Conclusion**

The study provides valuable insights into the complex relationship between personality dimensions, conflict resolution strategies, and marital satisfaction. The results highlight the importance of considering both individual and contextual factors in understanding marital outcomes.
Personality Dimensions, Conflict Resolution Strategies and Marital Satisfaction

Chapter 5

Summary

Introduction

Marital satisfaction is linked to the happiness of the partners which is utmost need, resolution of conflict and emotional support. Further, one can see that it is one of the most important factors which lead to the overall satisfaction in marital life of the person (Winter & others, 1990; Guglitz & Lamm, 1990). It reflects the marital advantages and values of benefit in marriage to a particular person. Similarly, all the positive aspects of marriage, one can achieve greater and more satisfying 10% in marital life and with the partner (Shnee & Shakil, 1991).
