Acknowledgements

The result of the hard work of many people, this thesis which I began remembering the Word of God: “But by the grace of God, I am what I am, and his grace towards me was not in vain” (1 Cor. 15:10) has, I believe, come to a successful end. At this moment of accomplishment I am honoured in thanking everyone who has contributed in varying measures to help me make my dream come true. Foremost, I thank God, the almighty without whose gracious blessings, this work would have been impossible.

I may fall short of words as I thank my guide and my role model in the noble profession of teaching, Dr P. J. Jojo whom I wish to describe as a person “as hard as a diamond” (in his wisdom and knowledge of the subjects he handles) and “as soft as a petal of rose” (in his unassuming and down-to-earth dealings with people). He was ever approachable despite his busy time schedule with many academic and professional commitments. His guidance in each stage of the research, unreserved support, commitment to work, words of encouragement and timely corrections were the principal reasons behind the successful completion of this work. He always stood by me to inspire and motivate me especially during times of crisis of my life and gave me the moral support and freedom I needed to move on. Thanks a million sir for shaping my career; and to your family for their precious prayers and encouragement.

I also place on record my gratefulness to Rev. Sr Dr Soosamma Kavumpurath, the Principal of Fatima Mata National College, Kollam for her incessant motivation and for having provided me with the infrastructure and other facilities required for the research project. With deep gratitude, I admire and appreciate Dr Mohan P. Chougaonkar, the Principal collaborator of the research project for his sagacious remarks and valid opinions. I also take this opportunity to sincerely acknowledge the members of the Research and Development Centre, Bharathiar University for giving me a magnificent opportunity to do my research and for your constant support and invaluable guidance. I also express my heartfelt gratitude to the scientists of Low Level Radiation Research Laboratory for the enormous service they rendered by providing the list of cases of malfunctions in several specified places in the south west coast of Kerala; by guiding me how to go about the accumulation of the required data; and in steering me to fulfill the requirements of the thesis. I am also thankful to the experts of Regional Cancer Center, Trivandrum for their timely assistance in the statistical analysis.
The hard work and social commitment of the Anganwadi teachers, the grass root level health workers under the ministry of social welfare, Government of Kerala, deserve special mention. Without their selfless service, enthusiasm and sheer commitment this task would have been virtually impossible. Limitless gratitude to all the Anganwadi teachers for accompanying me to each house concerned; for convincing the people of the necessity of the study; and for inspiring them to be part of the research.

I wish to lavish praise on the inhabitants of the nine Panchayats namely Chavara, Thevalakkara, Karunagappally, Thodiyoor, Thazhava, Clappana, Alappad, Eravipuram and Thrikkovilvattom who co-operated with the study. Their help was mainly two-fold: i) they gladly consented to take part in the survey answering the set questionnaire and ii) they allowed me to place the dosimeter in their houses. With no monetary benefits in sight, it was their immense social commitment that was seen in their attitude for which I stand in admiration and gratitude.

I am also thankful to Dr E.V. Wilson, former Head of the Department of Physics, Fatima Mata National College, Kollam and all the teaching and non-teaching staff of the department, for their help and co-operation throughout my work. I would like to extend my warm gratitude and high regards to my research colleagues Mr Sunil A, Assistant Professor, Department of Physics, Fatima Mata National College, Kollam, Mrs. Rani K Pillai, Assistant Professor, Department of Physics, NSS College, Nilamel, Kollam, Mrs. Reeba Maria Jose, Mrs. Arunima S, Mrs. Lekshmi R and Mr Vishnu Prasad for their friendly transactions, genuine support and continuous encouragement.

Last but not the least, I am indebted to my loving wife Mrs. Delsy Ben, my beloved parents and all my family members who supported and encouraged me a lot during my research. Their understanding, love and prayers have been awesome to say the least.
