ACKNOWLEDGEMENT

The author is greatly indebted to Dr. S.P. Raychaudhuri Ph.D. (London), D.Sc. (Calcutta and London), F.R.I.C., F.N.I., Head of the Division of Soil Science and Agricultural Chemistry, Indian Agricultural Research Institute, New Delhi for his guidance, supervision and taking keen interest in the subject.

He is also grateful to Dr. B.P. Pal, M.Sc., Ph.D. (Cantab), F.B.S., F.N.I., Director, Indian Agricultural Research Institute, New Delhi for sanctioning necessary permission and giving him facilities to carry out this investigation at the Division of Soil Science and Agricultural Chemistry, Indian Agricultural Research Institute, New Delhi.

He further takes this opportunity of recording his sincere thanks to the following gentlemen for rendering their help to him in various ways during the course of this work.

1). Dr. Rama Murthy, B., Ph.D., Physical Chemist, Division of Soil Science and Agricultural Chemistry, I.A.R.I. New Delhi for his valuable suggestions.

2). Dr. Grim, R.E., Ph.D., State Geological Survey, Illinois, U.S.A. for sending illite mineral from his stock for this investigation.

5). The Director, Geological Survey, Government of India, Calcutta for supplying some clay minerals of Indian origin for this problem.

New Delhi,
14th September, 1956.
