Aims and Objectives

The aim of the study was to evaluate the effect of Turmeric extracts on gram positive bacteria which was restricted to only MRSA.

To determine the prevalence of MSSA and MRSA

Comparing the prevalence of HA- MRSA and CA- MRSA.

Comparative detection of MRSA by different parameters

To determine the prevalence of inducible Clindamycin resistance in MRSA

Evaluate the effect of Turmeric extracts on multidrug resistant gram negative Enterobacteriaceae members which includes *Escherichia coli*, *Klebsiella* sps and *Enterobacter* sps.
