List of Tables

Table 1.1: Area irrigated under Bhadar dam, Rajkot district .................................................. 14
Table 1.2: Some salient features of the study villages ............................................................... 15
Table 1.3: Details of water harvesting structures in study villages ........................................... 20
Table 2.1: A Comparative Table of the Study Organisations, and some salient features/characteristics .................................................................................................................. 112
Table 3.1: Incidence of Drought: Number of Villages Affected, year-wise ................................. 122
Table 3.2: Groundwater Balance and Utilization, Saurashtra .................................................... 127
Table 3.3: Sources of irrigation in Rajkot district ........................................................................ 128
Appendix 3.1: Groundwater conditions in Gujarat at a glance ................................................. 169
Table 4.1: Particle diameter ........................................................................................................ 181
Table 4.2: Study Villages and Coordinates .................................................................................. 223
Table 5.1: Groundwater development in study talukas ............................................................... 226
Table 5.2: Computation of Groundwater Balance and Stage of GW development for Ambaredi village (Mudrakartha, 2008) ............................................................................. 227
Table 5.3: Study Villages and Coordinates .................................................................................. 231
Table 5.4: Rainfall data for 1901-2002 for Ambaredi cluster ...................................................... 234
Table 5.5: Recharge and frequency of recharge occurrence for Ambaredi ................................. 237
Table 5.6: Analysis for Rainfall trend 1901-2002 for Jalsikka Cluster ........................................ 241
Table 5.7: Recharge in Jalsikka .................................................................................................... 243
Table 5.8: Water holding capacity and soil type ......................................................................... 247
Table 5.9: Rooting Depth, soil constants, recharge and available soil moisture relationship for Jalsikka for the year 2003 for actual rainfall (740 mm) ......................................................... 247
Table 5.10: Wilting point versus available soil moisture .............................................................. 250
Table 5.11: Impact of Rooting Depth layer on recharge and available soil moisture in Jalsikka ................................................................................................................................. 251
Table 5.12: Comparison of Recharge values for the year 2003 ................................................... 259
Table 6.1: Income and income sources per capita for study villages for year 2002-03 . 264
Table 6.2: Income and income sources per capita for study villages for year 2003-04 . 264
Table 6.3: Change in cropping intensity village wise in study villages ..................................... 268
Table 6.4: Change in cropping intensity village wise of Irrigated and Unirrigated Areas .......... 270
Table 6.5: Villagewise distribution of wells, check dams, plugs and ponds ............................... 283
Table 6.6: Change in WEM used for direct pumping from river by sample households across study villages .................................................................................................................. 286
Table 6.7: Village wise composition of pumpsets owned by households, 2003-4 ................. 291
Table 6.8: Caste composition and sources of income ................................................................. 296
Table 6.9: Stage of groundwater development computed by various methods ....................... 300
Table 6.10: Comparison of Recharge values for the year 2003-4 .......................................... 302
Table 6.11: Recharge and stage of groundwater development in study villages ............. 305
