LIST OF FIGURES

Fig. 1.1. Agent Community in Generating Semantic Web

Fig. 1.2. Generations of WWW and Tools Used in Implementation

Fig. 2.1. The four Versions of the Semantic Web Architecture Proposed by Berners-Lee

Fig. 2.2. Orthogonal Layered Architecture of Semantic Web

Fig. 2.3. Origin of Intelligent Agents

Fig. 2.4. An Active Document

Fig. 2.5. Multi-Agent System

Fig. 2.6. Characteristic of MAS

Fig. 2.7. Classification of Agents in MAS

Fig. 2.8. Java Agent Development Environment

Fig. 4.1. High Level view of MAFSW

Fig. 4.2. Classification Details of Key Dimensions

Fig. 4.3. High Level View of Skeletal Method Proposed by Uscold

Fig. 4.4. Translation of Terms in Ontology Knowledge Base

Fig. 4.5. Algorithm for Ontology Development

Fig. 4.6. Mapping of Term in Ontology Knowledge Base

Fig. 4.7. Domain Model of Ontology Mapping System

Fig. 4.8. Proposed Intelligent Ontological Interface
Fig. 4.9      High Level View of Ontological Mapping Framework
Fig. 4.10(a)  Algorithm for Interface Agent
Fig. 4.10(b)  Algorithm for Information Agent
Fig. 4.10(c)  Algorithm for Mapping Master Agent
Fig. 4.10(d)  Algorithm for Message Handler Agent
Fig. 4.10(e)  Updation algorithm for Temporary Log
Fig. 4.11(a)  Ontology Mapping Between Student and Hospital
Fig. 4.11(b)  Ontology Mapping Between Living Beings and Animals

Fig. 4.12      Graph for Performance of Proposed System
Fig. 4.13      Trust Establishment Contract Net Protocol Architecture
Fig. 4.14(a)  Flow Diagram of CNTEP
Fig. 4.14(b)  Flow Diagram for CNTEP in IAM3I
Fig. 4.15(a)  Algorithm for Trust Establishment Protocol
Fig. 4.15(b)  Algorithm for Initiator Agent
Fig. 4.15(c)  Algorithm for Contractor Agent
Fig. 4.15(d)  Algorithm for Bid Evaluation Agent
Fig. 4.16     Process of Handshaking and Message Transmission
Fig. 4.17     High Level View of the Framework
Fig. 4.18     Flow Diagram of the Proposed Framework
Fig. 4.19(a)  Algorithm for Trust Verification Agent
Fig. 4.19(b) Algorithm for Encryption-Decryption Agent
Fig. 4.19(c) Algorithm for Trust Interface Agent
Fig. 4.20(a) Class Diagram for the proposed Framework
Fig. 4.20(b) Interaction Diagram for the Components
Fig. 4.21 Defining Linguistic Variables using Fuzzy Logic
Fig. 4.22 Associating Fuzzy Quantifiers with Membership Values
Fig. 4.23 Defining Person’s Attributes using RDF
Fig. 4.24 High Level View of the Fault-Tolerance Framework
Fig. 4.25 Emergent Graph Structure of a MAS
Fig. 4.26(a) Algorithm for Fault Management Agent
Fig. 4.26(b) Algorithm for Event Monitor Agent
Fig. 4.27 Flow Diagram of the proposed Framework
Fig. 4.28 Detailed View of Multi-Agent Framework for Semantic Web (MAFSW)
Fig. 5.1 Complexity of MAFSW
Fig 5.2 Time Reduces with Increase in No. of Participants
Fig 5.3 Complexity Follows Logarithmic Function
