PRELACE

The thesis deals with the study on 'Biology of Helminth Parasites'. The study of the morphology, anatomy, histochemistry, biochemistry, metabolism and neurosecretion was carried out by the author on the suggestions of the guide, Dr. S.D. Kalyankar, Department of Zoology, Marathwada University, Aurangabad.

Most of the study of the helminth parasites has been done on systematics by earlier workers.

But, there is vast scope for their biological and physiological studies of the helminth parasites and hence, the work was taken up. This aspect will add to our knowledge of the biological study of important helminth parasites.
