ACKNOWLEDGEMENTS

I am deeply indebted to Dr. B.N. Pande, Reader in Environmental Science, Department of Botany, Marathwada University, Aurangabad, under whose guidance and encouragement I had this opportunity to work. In spite of his various engagements he evinced great interest in my work, and I shall remain ever grateful for his inspiring guidance, valuable advice and it is because of his unfailing efforts that this work has been brought to completion.

I am deeply thankful to Dr. Deokar, Director, Mamurabad Research Centre for Oil Seeds, Mahatma Phule Krishi Vidyapeeth, Shri Patil, Farm Superintendent, and his colleagues for making every facility available to me in the sample collection field, Mamurabad (Jalgaon) during the period 1990-91.

I shall ever remain grateful to all the non-teaching staff of the Library of J.D.M.V.P.'s Sanstha, who are always ready to extend co-operation. It is my great pleasure to express my deep feelings regarding our cheerful Principal, Dr. K.R. Sonawane, who has been always behind me as a source of inspiration and encouragement for doing research work. I am also very much thankful to him for granting me the permission to utilise the laboratory facilities.
I do not want to miss the opportunity to thank Mr. B.V. Patil, Head of the Department of Botany and my academic patron, whose able support I always cherished.

I thank my family members for rendering me their full support and bearing with me in all kinds of situations during the course of my research work.

I am extremely thankful to my husband, Shri Nityanand M. Patil, who has been always a source of encouragement to me during all the course of my research work. But for help and inspiration it would not have been possible to finish this thesis.

Thanks are due to Shri Muraleedharan for typing the manuscript very critically and carefully and to Shrinivas Dixit and Sunil Patankar for their computeronics help.

Smt. Asmita N. Patil
