Dedicated to the developers of LATEX, Wavesurfer, PRAAT and other free softwares, Google and Wikipedia and to all who fight for free society, freedom of knowledge, freedom of thought and expression, equality and justice.
Never do I think my father is no more.

He is in my thoughts, words and speech.

In my passions, actions, writing and teaching

But still, I did miss him in every moment of research.
Acknowledgments

As I start writing acknowledgments my heart overflows with gratitude to all those who made research a memorable experience for me.

It is from the bottom of my heart that I express my gratitude to my guide Dr. Achuthsan k S. Nair, without whose whole hearted efforts I couldn't have completed my thesis. His encouragement, motivation and inspiration have been the primary driving force in my journey through research. I thank him for consistently applying the ‘pressure’, which put me back on track when ever I drifted away from my research. The academic freedom he granted me and the confidence he had on me facilitated my growth as a researcher. I gathered a lot of inspiration from him, especially the way he explains difficult concepts in a simple and elegant manner, effortlessly taking everyone along with him. I was fortunate to see the budding and growth of Center for Bioinformatics (CBI) within a short span of four years, which he carried out single handedly. It is great to see him carefully maintaining the ‘family atmosphere’ in CBI and the way he nurtures his students facilitating them to bloom fully, as expected from a great teacher. The efficiency with which he administers many things simultaneously, his potential for hard work, and his method of effectively implementing things each in its own way, is remarkable. I admire his scientific thinking, vision about education and respect for social activism. It was great to be a student of him.

I have spent hours and hours searching for proper words to express my thanks to my great friend and colleague Dr. M. R. Baiju. My view on academic research and my technical writing matured through the interactions with him. He took immense pain and effort in meticulously going through my earlier research papers. His suggestions and corrections had far reaching impacts in my writing. I always remember with reverence his words, his vision and his views on research, like the foundations in mathematics laid by my father. Being a great researcher and academician, from him I got a glimpse of quality research. The research forum which we together initiated in our department helped me a lot in formulating my research problem. When one come across a mastero in any field, we cannot say what is achieved, acquired or learned; rather one will be transformed and that was what I experienced. I realize that my indebtedness to him is beyond words.

I do not want to belittle my love and gratitude to my dear friend and colleague Vinod Chandra S. S. (who considers me as his elder sister), by putting it in a few words. I learned HMM from him and he was instrumental in developing the code for duration modelling using HMM. Apart from the valuable technical help he offered, his unparalleled willingness to
deliver any help and his potential to do things promptly and efficiently has always been the greatest assurance I had during my research period. We used to have fruitful technical discussions during my frequent visits to his department (MCA). Being a person with a commendable sense of humour, I always enjoyed the lighter moments I shared with him. He took great effort in critically and sincerely going through the final draft of the thesis to provide valuable suggestions.

The major turning point of my research came with my interaction with Dr. Sreenivasa Rao, Asst. Professor, School of Information Technology, Indian Institute of Technology Kharagpur and Dr. Leena Mary, Asst. Professor, RIT Kottayam, who were at that time doing research at Speech and Vision lab, IIT Chennai. I express my heartfelt thanks to Dr. Sreenivasa Rao who gave valuable inputs which helped me in identifying the problem of research. I cannot find words worth enough to thank Dr. Leena Mary, who facilitated the visit and the interaction. I am greatly indebted to her for the helping hand she gave.

My sincere thanks to Dr. Samudra Vijaya, School of Technology and Computer Science, Tata Institute of Fundamental Research, Mumbai, for the inspiration I gathered while interacting with him during ICON 2004 (IIIT, Hyderabad) and WISSAP-06 (IISc., Bangalore) and for the valuable inputs he provided regarding database preparation, while I contacted him over mail. I thank all the anonymous reviewers of the International Conferences I had attended for their valuable comments.

The greatest boon that research gave me was the opportunity to study language and linguistics. I thank Dr. S. Kunjamma, Head, Department of Linguistics, University of Kerala for permitting me to use the library. The interactions with my good friends in the department, Sri. Shijith S., Technical assistant and Aju Samuel Thomas, a research scholar have helped me to traverse into the magnificence of linguistics. I also thank the faculty of International School of Dravidian Linguistics, where I did a short term course on linguistics.

I thank the Director and staff of C.DIT, Thiruvananthapuram for allowing me to do thesis with C.DIT as the research centre. My special thanks to Deepa for all the help offered by her.

Words again fail me as I express my deep sense of gratitude and to my dear students Veena S. G., Avaneet Aravind, Karthika Vijayan and Jishnu S. for their help at various stages of my work and for being my close friends. My special thanks to Linu Shine, my dear friend and colleague who passionately read the first draft of my thesis. She took great effort to critically go through every sentence to provide valuable suggestions. I remember with love and gratitude the sincerity with which she did that even though the topic was quite unfamiliar to her.
Love to my dear friend and former colleague Dr. V. G. Geethamma who was the first person to persuade me into doing this academic research. I was fortunate to watch her do research and to participate in her open defence, which gave me an opportunity to be in the company of academicians doing quality research (Polymer Science group in M.G. University under Dr. Sabu Thomas). Her love, motivation and confidence gave me the initial thrust to proceed with registration. I thank my dear friend and former colleague Rajeev K. for being a good critic and for taking an uncompromising stance towards quality research. My special thanks to my colleague Suresh K. for sharing his research experience with me. His Masters thesis was one of the pioneering works in speech research for Malayalam language. I thank my colleagues in the department Susan R.J. and Ambily N. and my former colleagues Anandaresmi S. and Sasikumar P., for their encouragement and motivation.

Personally the greatest gift I got during my research life is the friendship of Smitha Dharan, Sister Lissy Anto, Prof. Vrinda V. Nair and Sheeja M.K., research fellows at CBI. The small talks and technical discussions we had always kept my morale high and made my research life at CBI enjoyable and motivating. Smitha’s work on biclustering gave me the idea of doing clustering for duration patterns. Sister and Vrinda teacher made my stay at Loyola hostel during the fag end of research memorable. I will aways cherish those days when we used to come early to CBI and water the plants in the garden nurtured by Sister. It was great to be in the CBI family in company of Amjesh, Gopakumar, Arun, Lijo and Anoop. I acknowledge with love the help, motivation and encouragement they have given. My special thanks to Dr. Sreenathan, for his poetic language which had always inspired all of us and for the helping hand he always offered. I also thank Joshua Sir and other office staff of CBI for their help during my work at CBI.

I acknowledge with reverence the consistent motivation and encouragement given by former HOD’s of our department, Dr. Sukesh Kumar A. and Prof. Saheeda P.A. It was only because of his efforts, persuasion and motivation, that I could participate in the three International Conferences abroad. The positive energy he instilled was essential to go through all the buerocratic hurdles for journey sanction to go abroad.

Special thanks to my dear friends Krishna Kumar and Shameem, whom I could always call upon for any technical help regarding any software or hardware. Love to Lalu, Ramki, Binoy, Anila and Haris for being my dearest friends, which I consider as the greatest gift in my life. Lalu my dearest, has put commendable effort in reading through the introduction and conclusion and gave valuable suggestions regarding language and style.

Love to my Amma who still believe that I am her 4 year old child, whom she taught ‘who r u?’ and ‘what r u?’. She facilitated my research work by
shouldering all the household responsibilities and it was only because of her support that I could complete my work. My brother has always been the greatest assurance in my life. My reading flourished through the books he brought and my thoughts matured through the discussions with him. My love to him for being my dearest brother. Renjinichechi my cousin and sister-in-law had always inspired me with her respect, admiration and encouragement for my work. The shining in her eyes filled with love and aspirations has never faded, even in her trying periods. I remember with love and thanks the help given by her in compiling the bibliography. Love to Manichechi, for being herself, for being my greatest inspiration and assurance, for understanding me and for being with me during the crucial part of my work, which gave me a lot of strength. I remember with love my 90 year old grand mother, whose hundreds of stories and innumerable poems has facilitated the development of my language faculty.

Love to my children Jain, Anukkutty, Anoop and Ajay and to my cousins Anitha, Aji and Anil, teaching whom always enabled me to refresh the basic concepts of mathematics and science. I acknowledge the love and understanding of my cousins Sasichettan, Suresh and Chandrachechi and my in-laws, which has provided me a peaceful and comfortable life. While I write the acknowledgements, I remember with love and reverence, my brother-in-law, Viswanchettan a Professor par excellence, who helped me a lot in improving the proficiency in English during my predegree studies.

Love to our 6 year old son Thennal, who by forcefully demanding my time in his creative pursuits, has pushed my imagination to unseen bounds. Being with him, I had relived my childhood, learned quite a lot and had enriching experiences beyond words. Finally love to my Kuriappy for being himself, for being with me and for living the life we live together.
