## CONTENTS

1. Introduction 1-15
   - Objectives 15
2. Review of Literature 16-32
   - Male genital system 17-20
   - Female genital system 20
   - Developmental effects 20-23
   - Brain 23-25
   - Cardiovascular system 25-26
   - Blood 26-28
   - Other body organs 28-29
   - Hormones 29
   - Subcellular effects 29-30
   - Genetic effects 30
   - Biochemical parameters 31-32
   - Body weight 32
3. Materials and Methods 33-44
   - Housing of test animals 33
   - Experimental design 33-44
     - A. Histopathology of testes of rat *in vitro* 34-35
     - B. Electron Microscopic analysis of rat testis after exposure to EMR 36-37
     - C. Testosterone assay by Chemiluminiscent (CLA) method for steroidogenic output of rat testis 37
     - D. Neutral Microgel Electrophoresis to assess DNA damage of rat Sperms 37-43
     - E. Halo assay to assess number and type of damaged cells 43-44
