

## LIST OF TABLES

<b>Table No.</b>	<b>Title</b>	<b>Page No.</b>
2.1	Moisture content and maximum allowable temperature of some crops	8
2.2	Commonly used materials for solar dryers	9
2.3	Advantages and disadvantages of various drying methods	13
2.4	Input and output data for calculation of drying performance	59
2.5	Various design parameters of solar dryer	60
2.6	Comparative study of different natural convection solar dryers	61
2.7	Comparative study of different forced convection solar dryers	62
2.8	Comparative study of different hybrid solar dryers	63
2.9	Quality attributes of dried products	64
3.1	Details of the Cashew processing industries and their locations	72
3.2	Data sheet for energy audit in cashew nut processing industries	72
3.3	Materials and energy flow pattern in three different industries	75
3.4	Total energy consumption of electrical based drying industries	77
3.5	Total energy consumption of steam based drying industries	78
3.6	Total energy consumption of biomass based drying industries	78
4.1	Design parameters of hybrid solar dryer	86
4.2	Instrumentations used in the experiment	87
4.3	Uncertainties of the Parameters during drying of cashew	87
4.4	Experimental data for forced convection solar dryer	92
4.5	Comparative study of different drying methods for cashew	99
4.6	A typical day results of biomass drying	101
4.7	Comparison of drying time of different dryers	106
4.8	A typical day result of solar biomass hybrid dryer	107
4.9	Collector and drying chamber temperature at different drying mode	110
4.10	Collector and dryer efficiency at different drying mode (%)	113
5.1	Thin layer drying mathematical models	120

5.2	Statistical results from various thin layer drying models for forced hybrid drying	126
5.3	Statistical results from various thin layer drying models for forced solar drying	127
5.4	Statistical results from various thin layer drying models for forced biomassdrying	128
7.1	Energy cost of conventional drying	147
7.2	Initial cost of components of renewable energy based dryer	148
7.3	Initial cost of renewable energy based dryers	149
7.4	Initial investment and annual cash flow data	150
7.5	Simple payback period	151
7.6	Accounting rate of return	152
7.7	Net Present Value (NPV)	152
7.8	Benefit-cost ratio	154

## **LIST OF FIGURES**

<b>Figure No.</b>	<b>Title</b>	<b>Page No.</b>
1.1	Schematic diagram of cashew tree, cashew fruit and cashew kernel	1
2.1	Open sun drying	7
2.2	Classification of solar dryers.	10
2.3	Direct solar drying	11
2.4	Indirect solar drying	12
2.5	Direct solar drying of grapes	14
2.6	Portable solar cabinet dryer	15
2.7	Direct solar cabinet dryer	15
2.8	Natural convection system cabinet dryer	16
2.9	Staircase type cabinet dryer	17
2.10	Solar cabinet dryer	18
2.11	Cabinet dryer	18
2.12	Direct solar cabinet dryer	19
2.13	Schematic diagram of a solar cabinet dryer	20
2.14	Different mode of transfers during direct solar drying with storage system	20
2.15	Reverse absorber cabinet dryer	21
2.16	Seesaw dryer	22
2.17	Schematic view of a seesaw dryer	22
2.18	Tent dryer under experimental test	23
2.19	A greenhouse solar dryer	24
2.20	A greenhouse type natural-circulation solar–energy dryer	25
2.21	Direct absorption solar dryer	26
2.22	Cross sectional view of a composite absorber type solar dryer	27
2.23	Indirect type conventional dryer	28
2.24	A natural convection solar dryer	28
2.25	Natural convection solar dryer	29

2.26	Multipurpose natural convection solar dryer	30
2.27	Solar tunnel dryer	31
2.28	General overview of a multitasked solar dryer	31
2.29	Illustration of the shell dryer	32
2.30	A mixed mode solar dryer for drying beans	33
2.31	Rotary column cylindrical drier	34
2.32	Modified indirect active solar dryer with cylindrical section	35
2.33	Solar batch dryer	36
2.34	Parabolic trough solar collector	37
2.35	Solar air heater	37
2.36	Schematic diagram of mixed mode solar dryer	38
2.37	Experimental setup of recirculation type solar air dryer	39
2.38	Cross-sectional view of the crop dryer with water heater	41
2.39	Cross-sectional view of the crop dryer inclined multi-pass air heater with built in thermal storage with reflector	41
2.40	Indirect active solar dryer with sensible heat storage	42
2.41	Cross-section view of the indirect type natural convection solar dryer with Storage	43
2.42	General view of the geothermal hybrid dryer	44
2.43	Schematic diagram of solar-assisted chemical heat pump dryer	45
2.44	Schematic diagram of an indirect active hybrid solar-electrical	47
2.45	Schematic view of the desiccant integrated solar dryer	47
2.46	Hybrid solar dryer for drying banana	48
2.47	Hybrid solar dryer	49
2.48	Schematics of the solar-assisted drying system with the V-groove collector	50
2.49	Roof-integrated solar drying system	50
2.50	Schematics of PV-assisted solar drying system	51
2.51	Dish type solar collector	52
2.52	Hybrid PV/T integrated greenhouse dryer	53
2.53	Schematic of hybrid PV/T – desiccant integrated Infrared drying system	54

2.54	Schematic diagram of solar biomass dryer	55
2.55	Biomass hybrid solar dryer with heat storage backup heat	56
2.56	Hybrid solar dryer with LPG burner	57
2.57	Schematic diagram of hybrid dryer with LPG burner	58
3.1	Flow chart for various processes for drying cashew kernel	68
3.2	Various processes for drying cashew	69
3.3	Location of cashew processing industries in Cuddalore district	71
3.4	Comparison of total energy consumption	80
4.1	Components of the solar dryer	83
4.2	Perspective view of the Hybrid solar dryer	84
4.3	Variation of ambient, collector outlet, drying chamber temperature and solar insolation in forced convection mode	94
4.4	Variation of ambient, collector outlet, drying chamber temperature and solar insolation in natural convection mode	95
4.5	Variation of drying rate with drying time	96
4.6	Variation of drying rate with moisture content at different drying conditions	97
4.7	Variation of drying time with collector efficiency at different drying conditions	97
4.8	Variation of drying time with dryer efficiency	98
4.9	Variation of drying time with effectiveness factor	98
4.10	Variation of moisture content with drying time	102
4.11	Variation of drying rate with drying time	103
4.12	Variation of biomass combustion efficiency with drying time	103
4.13	Variation of biomass drying efficiency with drying time	105
4.14	Visual quality appearance of the dried cashew	106
4.15	Temperature profile inside the dryer in hybrid natural mode	109
4.16	Temperature profile inside the dryer in hybrid forced mode	110
4.17	Variation of drying rate with time	111
4.18	Variation of moisture content with drying time	112
4.19	Variation of collector efficiency with time	112

4.20	Variation of dryer efficiency with time	113
4.21	Variation of effectiveness factor with time.	114
5.1	Variation of moisture ratio - experimental and predicted with drying time for forced solar dryer	123
5.2	Variation of moisture ratio - experimental and predicted with drying time for hybrid dryer	123
5.3	Variation of moisture ratio - experimental and predicted with drying time for biomass dryer	124
5.4	Average value of $R^2$ , $\chi^2$ and RMSE	125
6.1	3D model of solar biomass hybrid dryer	133
6.2	Distribution of air temperature in natural convection solar dryer	134
6.3	Distribution of air temperature in forced solar dryer	136
6.4	Distribution of air temperature in forced solar biomass hybrid dryer	137
6.5	Comparison of experimental and simulation results under natural Solar mode.	138
6.6	Comparison of experimental and simulation results under forced solar mode.	138
6.7	Comparison of experimental and simulation results under forced hybrid mode.	139
7.1	Classification of profitability methods	143
7.2	Revenue - dominated cash flow diagram	145
7.3	Project benefit using net present value	154
